

### Great Harvest Wheat Quality Statement

Great Harvest Franchising, Inc. makes a point to provide the highest quality wheat to our bakeries. Part of this standard is ensuring that GMOs and harmful levels of chemicals are absent in our wheat.

We feel confident that our wheat is not genetically engineered, because according to the USDA there are no genetically engineered (GE) wheat varieties commercially available anywhere in the world at this time. We also maintain a close relationship with our farmers and their practices which we get to view first hand through annual site visits. To provide additional assurance Great Harvest Franchising, Inc. has established a system using third party testing facilities to analyze all of our whole grain wheat for genetic engineering as well as for the presence of chemical residue before it has the chance to enter our bakeries.

Based on our research we are delighted to confirm the following:

- No genetic engineering methods were used in the production of our whole wheat
- No chemicals were present above the EPA's pesticide residue limit in our whole wheat

Just as we are concerned about providing our personal families with the highest quality food and nutrients, that same concern overflows into our mission as your community bakery. We are committed to staying up to date on the latest research regarding health and wellness topics and assuring consistent high quality ingredients.

If at any time you have questions, we are more than happy to talk about our ingredients, the health benefits of whole grains, and the nutrition of our products. We will continue to test our wheat to guarantee the safety and quality of our wheat.

Sincerely,

Mike Ferretti  
CEO, President
