PRODUCT DESCRIPTION:

The BRKT-A022 is a quick-mounting bracket for attaching an antenna to a mast. It can be installed and removed by the action of a single clamping screw. It is intended to replace the traditional U-bolt solution, which has many loose parts, and is not practical for quick mounting.

Designed for the LPDA-A0076, the bracket incorporates a hole pattern for bolting permanently to the antenna. The antenna can then be fitted quickly to a mast or pole, without tools.

PRODUCT FEATURES:

- Quick fitting to pole
- Wide range of pole sizes accepted
- No tools required
- No loose parts to fall off
- One person operation

PRODUCT APPLICATIONS:

- Quick mast-mounting of antennas
