

MICHELS®

Michels builds the roads we take to school and the lines that bring electricity to our homes so we have lights. Michels also puts pipe into the ground so we have gas, oil and water. This makes our homes nice and warm, gives us gas for our cars and brings water to drink. Follow the instructions for the image below.

- Yellow circle around lights in the house
- Red box around things that keep us warm
- Green circle on the stove that uses gas or electricity to cook food
- Blue box on the car that uses gas to go
- △ Purple triangle on the things that use water

WHAT DOES MICHELS DO?
