AgileCraft

Software Company
IMPLEMENTING SAFE IN A RAPID GROWTH ORGANIZATION

COMPANY OVERVIEW

COMPANY GLOBAL RANK:
Forbes Cloud 100

REGION:
USA

INDUSTRY:
Software Development

IMPLEMENTATION OVERVIEW

SCOPE:
Enterprise

SEATS:
500 - 1000

FRAMEWORK:
SAFe

TEAM TOOL:
Jira

LEVEL:
Enterprise

AgileCraft is the only platform built for agile at scale. Visit us at www. agilecraft.com or twitter.com/theagilecraft

CHALLENGES

Lack of visibility and control into Release Train status. Limited visibility into the teams' work progress made dependency management extremely difficult.

Inconsistent Agile practices and Jira usage across the teams. Scaled Agile was the framework of choice, however, there was no clear path to adoption and successful SAFe implementation.

Inefficient manual reporting and status tracking. Comprehensive, accurate product roadmaps could not be delivered and status reports always contained outdated information.

SOLUTIONS

With Jira team data flowing through AgileCraft, visualization of dependencies between the teams and release trains became instant, simple and easy.

The AgileCraft JET tool identified the current practices that would impact the ability to effectively scale Agile. as well as actions to improve the Jira configuration to support consistency of Agile practices across the teams.

By having all their data in an integrated platform (Jira + AgileCraft), they could better prioritize key initiatives, and automatically produce accurate, up-to-date roadmaps.

RESULTS

Dependencies are now actively managed via dashboards and real-time collaboration.

Changes that impact the delivery of epics and their associated stories in Jira now automatically notify impacted teams when risks are introduced. The enterprise is now able to configure hierarchies above the team level.

C-level executives now have access to accurate, self-service, real-time status reports. Product roadmaps are now easily produced for both internal and external stakeholders while being connected to live data.

BENEFITS

REDUCE MANUAL EFFORT
Don't spend big money trying to get data from multiple systems in order to compile rolled-up reports by hand. Automatically harmonize reporting at scale.

HOW: Real-time enterprise reporting and analytics, Business Intelligence integration.

SEAMLESS JIRA SETUP AND INTEGRATION
Clean up, align and ready your team data using specialized tools and services that ensure a secure and simple transfer.

HOW: AgileCraft's Jira Export Tool (JET), AgileCraft services Solutions Architects.

SUCESSFULLY ROLL OUT SAFe
Drive operational excellence with SAFe , using out of the box support for scaled agile process to dramatically improve likelihood of success.

HOW: Purpose-built for SAFe. Strong WSFJ support, theme management, Risk ROAMing, ART budgeting, SAFe metrics.
