1 EL160.120.39 display

The EL160.120.39 thin film electroluminescent (TFEL) display is a small, high visual performance graphic display that excels in a wide range of ambient lighting environments. The EL160.120.39 utilizes Lumineq[®] Displays' proprietary Integral Contrast Enhancement (ICEBrite[™]) technology to achieve unparalleled image quality without the use of filters or temperature compensation.

The display module consists of a TFEL glass panel and control electronics assembled into a space-saving, rugged package for easy mounting and includes an integrated DC/DC converter. The EL160.120.39 is easily interfaced using standard 4-bit LCD control signals. Each of the pixels has an aspect ratio of 1:1 and is individually addressable to clearly display high information-content graphics and text.

1.1 Features and benefits

- Excellent visual performance
 - High brightness and contrast
 - Wide viewing angle > 179°
- Rapid display response < 1 ms
- Space-efficient mechanical package
- Low EMI emissions
- Extremely rugged and durable
- Reliable, long operating life: >50,000 MTBF
- 4-bit LCD-type interface

2 Installation and handling

Do not drop, bend, or flex the display. Do not allow objects to strike the surface of the display.

CAUTION: The display uses CMOS and power MOS-FET devices. These components are electrostatic-sensitive. Unpack, assemble, and examine this assembly in a static-controlled area only. When shipping, use packing materials designed for protection of electrostatic-sensitive components.

CAUTION: To prevent injury in the event of glass breakage, a protective overlay should be used on the viewer side of the display.

2.1 Mounting

Properly mounted, TFEL displays can withstand high shock loads as well as severe vibration found in demanding applications. However, the glass panel used in a TFEL display will break if subjected to bending stresses, high impact, or excessive loads.

Avoid bending the display. Stresses are often introduced when a display is mounted into a product. Ideally, the mounting tabs of the display should be the only point of contact with the system. Use a spacer or boss for support; failure to do so will bend the display and cause the glass to break. The instrument enclosure or frame should not flex or distort in such a way that the bending loads might be transferred to the display during use. Mounting surfaces should be flat to within ± 0.6 mm (± 0.025 "). Use all the mounting holes of the tab-mounted displays. Failure to do so will impair the shock and vibration resistance of the final installation.

The EL160.120.39 and the EL160.120.39-CC are a tab-mounted display. Use appropriate length standoffs to assure that screws through the mounting tabs do not introduce bending stresses into the display. Do not deflect the circuit board out of its normal plane.

The EL160.120.39-NE display should be mounted to the instrument enclosure without introducing bending stresses into the display. Failure to do so will also impair the shock and vibration resistance of the final installation.

WARNING: These products generate voltages capable of causing personal injury (high voltage up to 230 V_{AC}). Do not touch the display electronics during operation.

2.2 Cable length

A maximum cable length of 600 mm (24 in.) is recommended. Longer cables may cause data transfer problems between the data transmitted and the display input connector. Excessive cable lengths can pick up and source unwanted EMI.

2.3 Cleaning

As with any glass or coated surface, care should be taken to minimize scratching. Clean the display glass with mild, water-based detergents only. Apply the cleaner sparingly to a soft cloth, then wipe the display. Disposable cleaning cloths are recommended to minimize the risk of inadvertently scratching the display with particles embedded in a re-used cloth. Particular care should be taken when cleaning displays with anti-glare or anti-reflective films.

2.4 Avoiding burn-in

As with other light-emitting displays, displaying fixed patterns on the screen can cause burn-in where luminance variations can be noticed. Use a screensaver or image-inversion technique to avoid causing burn-in on the display.

3 Specifications

The TFEL panel is a matrix structure with column and row electrodes arranged in an X-Y formation. Light is emitted when an AC voltage of sufficient amplitude is applied at a row-column intersection. The display operation is based on the symmetric, line-at-a-time data addressing scheme. Performance characteristics are guaranteed when measured at 25 °C with rated input voltage unless otherwise specified.

3.1 Power

The supply voltages are shown in Table 1. All internal high voltages are generated from the display supply voltage (V_H). The logic supply voltage (V_L) should be present whenever video input signals or V_H is applied. The minimum and maximum specifications in this manual should be met, without exception, to ensure the long-term reliability of the display. Beneq does not recommend operation of the display outside these specifications.

Any combination or sequencing in the application or removal of V_L , V_H , or video signals will not result in abnormal display operation or display catastrophic failure.

Table 1. DC input voltage requirements

Description	Symbol	Min	Typ.	Max	Absolute Max	Units
Input voltage (nom=12.0 V)	V_H	8		18	19	V_{DC}
Input voltage (nom=5.0 V)	V_L	4.75		5.25	6.0	V_{DC}
12V input current ($V_H = 12.0$ V)	I_H max			0.35		A_{DC}
5V input current ($V_L = 5.0$ V)	I_L max			0.10		A_{DC}
Power consumption 5 V/12 V @ max. frame rate			3.0		3.9	W

CAUTION: Absolute maximum ratings are those values beyond which damage to the device may occur.

Table 2. Video input requirements

Description	Min	Max	Units	Notes
Absolute input voltage range	-0.5	$V_H + 0.5 V_{DC}$	V_{DC}	$V_{I_{max}}$
Video logic high voltage	70%	100%	V_{DC}	V_{I_H}
Video logic low voltage	0%	20%	V_{DC}	V_{I_L}
Video logic input current	-10	+10	μA_{DC}	I_{I_L}

Note: All data signal inputs are LC-filtered.

3.2 Data and power connector

The EL160.120.39 uses the 20-pin, 2 mm locking connector, Samtec EHT-110-01-S-D. The mating connector is the Samtec TCSD family of cable strips. Compatibility with non-Samtec equivalents should be verified before use.

Figure 1. Data/power connector

Table 3. J1 connector pinouts

Pin	Signal	Description	Pin	Signal	Description
1	V _H	+12 VDC Power	2	V _H	+12 VDC Power
3	Self-test	Self-test Input ¹	4	LUM	Luminance Control
5	V _L	+5 VDC Power	6	GND	Ground
7	VS	Vertical Sync	8	GND	Ground
9	HS	Horizontal Sync	10	GND	Ground
11	VCLK	Video Clock	12	GND	Ground
13	VID ₀	Video Data	14	GND	Ground
15	VID ₁	Video Data	16	GND	Ground
17	VID ₂	Video Data	18	GND	Ground
19	VID ₃	Video Data	20	GND	Ground

¹ Connect pin 3 to ground for normal display operation.

3.3 Generating grayscales

The EL160.120.39 is a monochrome display, but it can show few gray scales which are generated by an external display controller by using dithering and frame skipping methods.

3.4 Interface information

Beneq TFEL Small Graphics Displays (SGD) incorporates an interface that is similar to many LCD modules. This interface is supported by a variety of off-the-shelf chip sets which take care of all display control functionality, freeing the system processor for other tasks. This 4-bit LCD-type video interface provides a low-cost, flexible method for controlling display brightness and power consumption.

3.4.1 Video Input signals

The end of the top line of a frame is marked by VS, vertical sync, signal as shown in Figure 2. The first pixel of each row is marked by the falling edge of HS. The first 160 pixels, or 40 clocks, after the falling edge of HS will be visible on the display.

The VS signal is active high. It may be independently set to a CMOS low level at any time for longer than one frame period. During the time of VS inactivity, the display is blank. Halting VS results in a standby condition to minimize power consumption. Input signals VID3 through VID0 contain the video data for the screen. Pixel information is supplied from left to right and from top to bottom four pixels at a time.

Figure 2. Video input timing diagram

Timing is compatible with LCD graphics controllers, such as the S1D13700 and S1D13709.

Table 4. Video input descriptions

Num	Description	Symbol	Min.	Typ.	Max.	Units
1	HS high time	tHSh	100			ns
2	HS low time	tHSl	40			tVCLK
3	HS to VCLK rise	tHSsu	95			ns
4	VID setup to VCLK	tVIDsu	50			ns
5	VID hold from VCLK	tVIDhd	50			ns
6	VID clock period	tVCLK	140			ns
	VCLK rise, fall time	tVCLKrf		10	15	ns
7	VCLK low width	tVCLKl	60			ns
8	VCLK high width	tVCLKh	60			ns
9	VS high setup to HS low	tVShsu	140			ns
10	VS hold after HS	tVShd	140			ns
11	VS low setup to HS high	tVSlsu	140			ns
12	HS period	tHS	52			μs
	VS period	tVS	121			tHS
	Frame Rate	fVS	0		150	Hz

Figure 3. Pixel location versus sequence of data

3.5 Self-test mode

The display incorporates a self-test mode composed of five patterns displayed for approximately 2,5 to 6 seconds each, and then repeated. The patterns are as follows: Full On 6 s, Column 2 ON/2 OFF 6 s, Column 1 ON/1 OFF 6 s, 1 x 1 Checkerboard 2.5 s and 1 x 1 Checkerboard inverted 3 s. The self-test mode is entered when pin 3 is pulled high or left open. For normal operation, the SELFTTEST pin must be connected to ground.

3.6 Optical

Table 5. Optical characteristics

Luminance		
L _{on} (areal), min	50 cd/m ²	screen center, 150 Hz frame rate
L _{on} (areal), typ	70 cd/m ²	screen center, 150 Hz frame rate
L _{off} (areal), max	0.3 cd/m ²	5 points: center plus four corners measured 10±2 mm from display edges, 150 Hz
Non-uniformity		
All pixels fully lit	25%	Maximum difference between two of five points, using the formula: LNU%=[1- (min_lum/max_lum)] x 100
Luminance variation (Temperature)		
Maximum	±20%	Across operating temperature range @ 120 Hz
Luminance variation (Time)		
Maximum	<20%	10,000 hours at 25 °C ambient @ 120 Hz
Viewing angle		
Minimum	>160°	
Contrast ratio		
Typical	59:1	@ 500 lux ambient, max frame rate
	32:1	@ 1,000 lux ambient, max frame rate
	4.3:1	@ 10,000 lux ambient, max frame rate

3.7 Dimming

Analog dimming is available on the EL160.120.39 display by connecting an external 50 kΩ logarithmic potentiometer to the dimming port. Alternatively, an external voltage or current-mode D/A converter may be used to dim the display by sinking a 0-250 μA current at 4-0 voltages respectively from the control pin to ground.

Table 6. Dimming rates

Resistance	Dimming
Maximum (no resistor connected)	100% (Default)
Maximum (50 kΩ resistor connected)	95%
Minimum (0 Ω resistor connected)	5% maximum
Values are measured as a percentage of full on luminance	

3.8 Environmental

Table 7. Environmental characteristics

Temperature	
Operating	-50 °C to +70 °C
Operating survival	-50 °C to +85 °C
Non-operating	-60 °C to +105 °C
Humidity	
Non-condensing, operating	93% RH max @ 40 °C, per IEC 60068-2-78
Condensing, Non-operating	95% RH max @ 55 °C, per IEC 60068-2-30
Altitude	
Operating	0 to 18,000 m (58k ft) per IEC 60068-2-13
Vibration	
Operating	Random vibration test performed for 30 minutes on each axis, flat frequency profile, per IEC 60068-2-64, Test Fdb. Test range is 20-500 Hz at 0.02 g ² /Hz. Tested with the tab-mounted displays.
Shock	
Operating	100 g, 6 ms duration, half sine wave, 3 shocks on each of 6 surfaces per IEC 60068-2-27, test Ea. Tested with the tab-mounted displays.
Thermal shock	
Non-operating	Lower -45 °C, upper +85 °C. Dwell time 30 min., transition time < 3 min. Number of cycles 5. Per IEC 60068-2-14.

3.9 Reliability

The display demonstrates MTBF greater than 50,000 hours at the maximum frame rate with a 90% confidence level at 25 °C.

3.10 Safety and EMI performance

The display module will not prohibit the end product from obtaining EN61010-1:2010. certification.

The display is UL60950 recognized. The display module will not inhibit the end product from obtaining EN55022 B certification.

The display is provided with a current-limiting circuit in the DC/DC converter to ensure safety in the case of a short circuit between a high voltage and +5 VDC circuitry.

3.11 Mechanical characteristics

Display external dimensions		
millimeters (inches)	width	93.6 (3.68), NE Version 81.0 (3.19)
	height	61.5 (2.42)
	depth	20.0 (0.78), component envelope
Weight (typical)		64 g, typical
Fill factor		59% nominal
Display active area		
millimeters (inches)	width	62.3 (2.45)
	height	46.7 (1.83)
	diagonal	77.86 (3.07)
Pixel size		
millimeters (inches)	width	0.30 (0.012)
	height	0.30 (0.012)
Pixel pitch		
millimeters (inches)	width	0.39 (0.015)
	height	0.39 (0.015)

3.12 Component envelope

The component envelope illustrates the distance the components extend behind the display. Tall components do not necessarily fill this area. Beneq reserves the right to relocate components *within* the constraints of the component envelope without prior customer notification. For this reason, Beneq advises users to design enclosure components to be outside the component envelope.

An air gap is recommended to dissipate heat from display components. Device designers need to consider their specific system requirements to determine the necessary spacing.

Dimensions in are millimeters.

4 Description of warranty

Seller warrants that the Goods will conform to published specifications and be free from defects in material during warranty time from delivery. To the extent that goods incorporate third-party-owned software, seller shall pass on seller's licensor's warranty to buyer subject to the terms and conditions of seller's license.

Warranty repairs shall be warranted for the remainder of the original warranty period. Buyer shall report defect claims in writing to seller immediately upon discovery, and in any event, within the warranty period. Buyer must return goods to seller within 30 days of seller's receipt of a warranty claim notice and only after receiving seller's return goods authorization. Seller shall, at its sole option, repair or replace the goods.

If goods were repaired, altered or modified by persons other than seller, this warranty is void. Conditions resulting from normal wear and tear and buyer's failure to properly store, install, operate, handle or maintain the goods are not within this warranty. Repair or replacement of goods is seller's sole obligation and buyer's exclusive remedy for all claims of defects. If that remedy is adjudicated insufficient, Seller shall refund buyer's paid price for the goods and have no other liability to buyer.

All warranty repairs must be performed at seller's authorized service center using parts approved by seller. Buyer shall pay costs of sending goods to seller on a warranty claim and seller shall pay costs of returning goods to buyer. The turnaround time on repairs will usually be 30 working days or less. Seller accepts no added liability for additional days for repair or replacement.

If seller offers technical support relating to the goods, such support shall neither modify the warranty nor create an obligation of seller. Buyer is not relying on seller's skill or judgment to select goods for buyer's purposes. Seller's software, if included with goods, is sold as is, and this warranty is inapplicable to such software.

SELLER DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

5 Ordering information

Product	Part number	Features
EL160.120.39	996-0303-00LF	Small graphics display with a wide temperature range and dimming
EL160.120.39 CC	996-0303-01LF	EL160.120.39 display with conformal coating
EL160.120.39-NE	996-0303-04LF	EL160.120.39 display without mounting ears

Design and specifications are subject to change without notice.

Beneq continues to provide optional, and in many cases custom, features to address the specific customer requirements. Consult Beneq Sales for pricing, lead time and minimum quantity requirements.

6 Support and service

Beneq Oy is a Finnish company based in Espoo, Finland, with a world-wide sales distribution network. Full application engineering support and service are available to make the integration of Lumineq displays as simple and quick as possible for our customers.

RMA Procedure: For a Returned Material Authorization number, please contact Beneq Oy by email (rma.lumineq@beneq.com) with the model number(s), serial number(s) and brief description of the problem. When returning goods for repair, please include a brief description of the problem, and mark the outside of the shipping container with the RMA number.

7 RoHS III

Lumineq displays are RoHS3 (Restrictions of Hazardous Substances in Electronic/Electrical Equipment) compliant and meet the requirements defined under European Union Directive (2015/863), that restrict the use of various hazardous substances in electronic equipment.

This document is compiled and kept up-to-date as conscientiously as possible.
