

Embedding: Delivering customer facing analytics

Pulling together the threads and delivering analytics as a service to your customers through embedding Tableau.

Objective.

More and more companies are enabling their customers to leverage data and provide customer facing analytics using Tableau Embedding as a vehicle.

During this workshop our consultants will take time to understand the status quo and design a blueprint for your deployment to ensure you can offer a rich feature set within a secure and scalable environment.

You'll walk away with the outline of an embedding strategy and the benefit of our years of experience.

Deliverables.

- Architecture + data pipeline review
- Authentication + security mapping
- Monetisation + commercial planning
- Define your Develop Ops cycle
- Wrapping up in an application or portal
