

IBM + Avalon

A Perfect Union

None of us fight the battle against today's adversaries alone. Working together, incident artifacts from IBM Resilient can be auto-populated in Avalon for visualization and analysis, then the investigation results automatically re-populated back into Resilient for further action. Avalon + Resilient empowers your team to easily visualize data, investigate threats, and deliver finished intelligence in real-time. Together.

Integration Highlights

Integrate Diverse Data Sources

Conduct investigations more efficiently by bringing all data sources together and automating common analyst queries.

Interact in Real-Time

Enable real-time information sharing and collaboration by creating trusted groups within your organization or across your industry.

Visualize Threats and Connections

Quickly visualize and enrich threat data from IBM Resilient and all threat intelligence sources in a single interactive workspace.

Deliver Results

Take action by exporting data directly back into IBM Resilient and reduce time spent on manual administrative tasks by easily creating and delivering finished intelligence directly from Avalon.

Preserve Investigations

Create a centralized knowledge repository to maintain investigative intelligence that can be utilized for future investigations.

Integration Benefits

- Quickly create an Avalon workspace from IBM Resilient to visualize and enrich threat intelligence.
- Increase analysis and reporting efficiency - recouping 200+ hours per analyst per year.
- Easily take action by exporting data back into IBM Resilient to perform orchestration actions and close the investigation.
- Enable analysts to focus on what they do best - security - instead of administrative tasks.
- Quickly deliver reporting needed across your organization and preserve past analyses to enrich future investigations.

Avalon Simplifies Security Analysis & Reporting - Integrating All Tools & Data in One Place

Avalon integrates activities completed during the analysts workflow, both inside and outside of Avalon, and helps security teams spend less time on manual, time-consuming administrative tasks and more time on security.

 Collaborative Reporting

 Key Stakeholders

King and Union

King and Union enables security teams to easily create and deliver the right intelligence to the right person across all levels of their organization by unifying data from multiple tools and results from investigations into a single cyber analysis delivery platform. With our platform, Avalon, security teams can quickly visualize threat data and investigate together in real time, and once complete, efficiently create and deliver the finished intelligence required to key stakeholders. Avalon reduces the time on manual, administrative tasks, leaving analysts more time to focus on security, and empowers organizations to take full advantage of the security investments they've made - in people, information and technology.

IBM Resilient Security Orchestration

Help battle complex threats with the IBM® Resilient Security Orchestration, Automation and Response (SOAR) Platform. The Resilient SOAR Platform enables your security team to integrate its security technologies and create powerful, agile workflows that can automate the response process. As a result, your analysts have the tools they need to investigate and resolve security incidents, and can continually refine their processes over time.
