

A Workshop by the Romer Labs® APAC Solutions Centre

Allergen free? The role of testing in your food allergen management programme

5 February 2020 | Bangkok, Thailand

Allergen free?

Collaborating
Partner: **CPAK**

It is tempting to think that choosing a method of analysis should be as simple as finding one that detects the allergen of interest and has a reasonably low limit of detection.

On the contrary, it is essential that the method selected to check for allergens is suited to purpose. It should not only evaluate the measures to be applied but also verify the effectiveness of the allergen management plan and, of course, monitor the allergen status of all ingredients, materials and products.

At this workshop, you will learn about allergen risk assessment in the production workflow and some practical ways to carry out analysis in your food allergen management plan.

Event Details:

Wednesday, 5 February 2020

09:00 - 16:15
