

Do you need to register your drone?

register-drones.caa.co.uk

Why do drones need to be registered?

We love drones, they're awesome, but because they're relatively low cost and easy to fly they can be used for the wrong reasons.

Even well-meaning drone pilots can become a danger to the public if they're not aware of the rules and regulations to follow.

Drone registration has been put in place to ensure that the Civil Aviation Authority can keep a record of all drone pilots and make sure that everyone is aware of the rules.

Just like you have a driving licence and a registration plate on your car, now you'll need a registration to prove that you're safe to fly.

How to register

You must register if you want to fly a drone or model aircraft

- Anyone who'll fly must pass a theory test to get a flyer ID
- The person that's responsible for the drone or model aircraft must register to get an operator ID
- If you'll fly your own drone or model aircraft, you'll need to register and take the test to get both IDs. Or you can just get the ID you need.

Find more information and the full rules at register-drones.caa.co.uk

Commercial Drone Pilots

If you're a commercial drone pilot the rules may be slightly different. It depends whether or not you're named on your company's Permission for Commercial Operations (known as PFCO).
