Categories

Protection

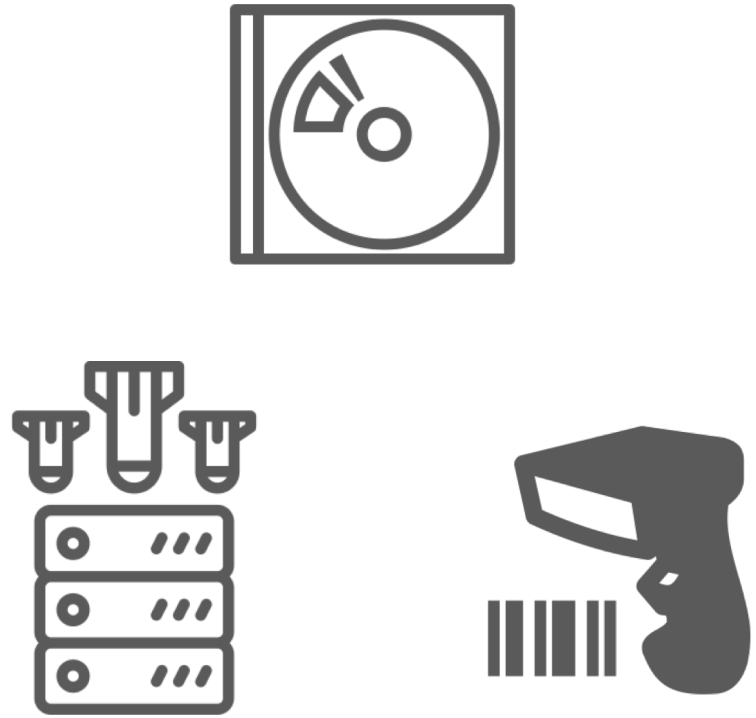
Detecting insecure network settings and patching cadence.

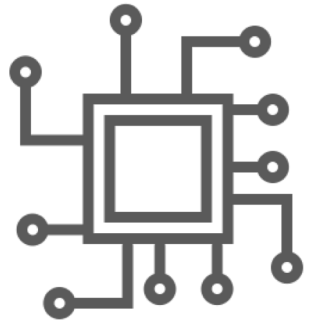


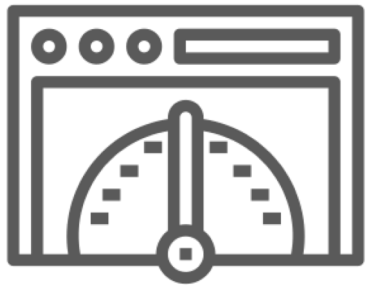
CyberSecurity™ ScoreCard

Categories

Health

Grading the performance level of the security infrastructure.



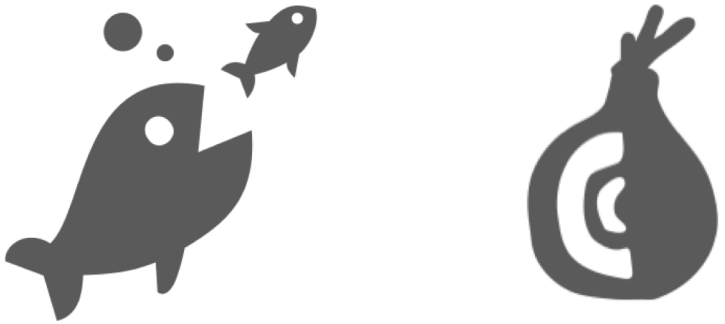


CyberSecurity™ ScoreCard

Categories

Behavior

Detecting internal network threats based on traffic patterns.



Categories

Users

Expose the traffic and authentication level of your users.

Categories

Connections

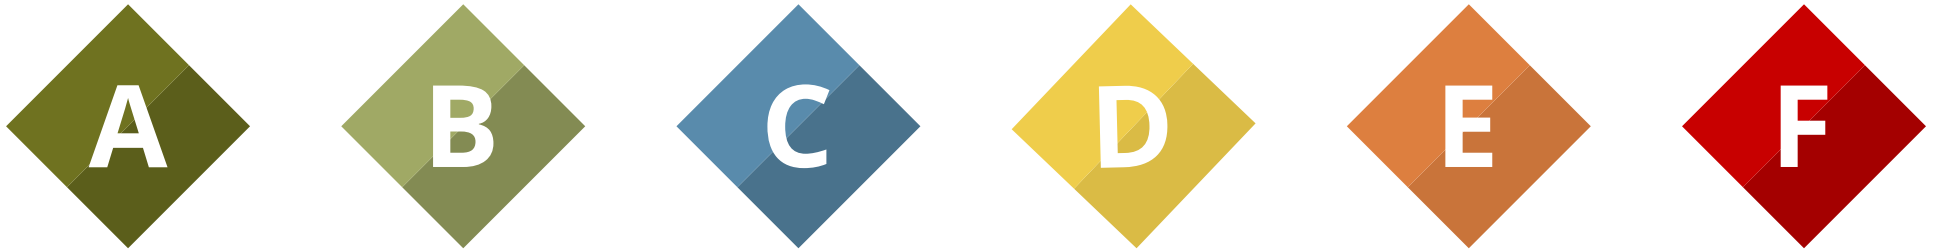
The status and quality of SD-WAN and VPN links.

Categories

Devices

Understanding the traffic from IoT, mobile and corporate units.

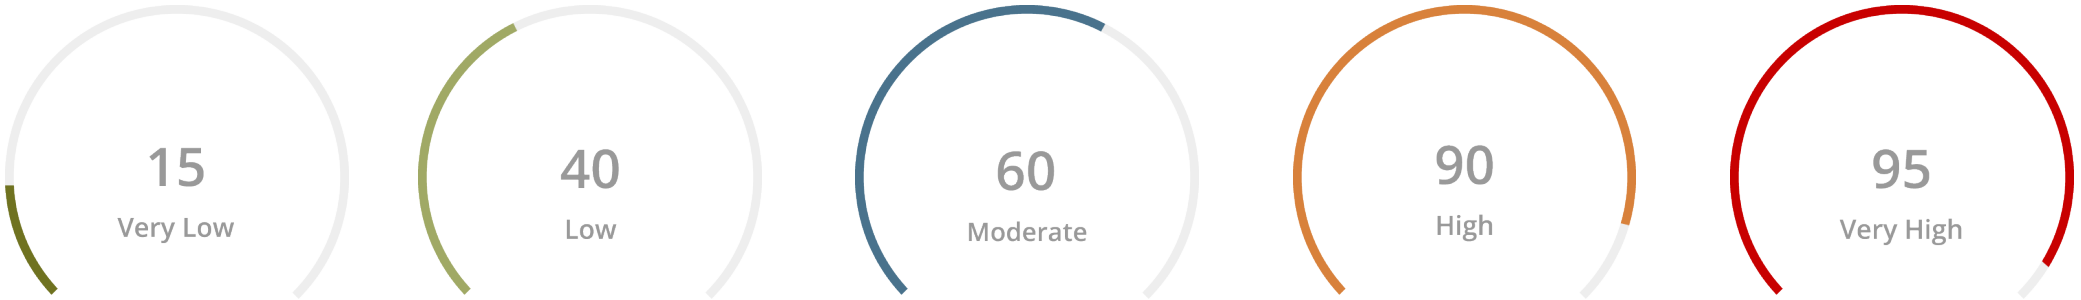
Categories



Overall Score

Ranging from A to F very simply explaining the status of the solution.

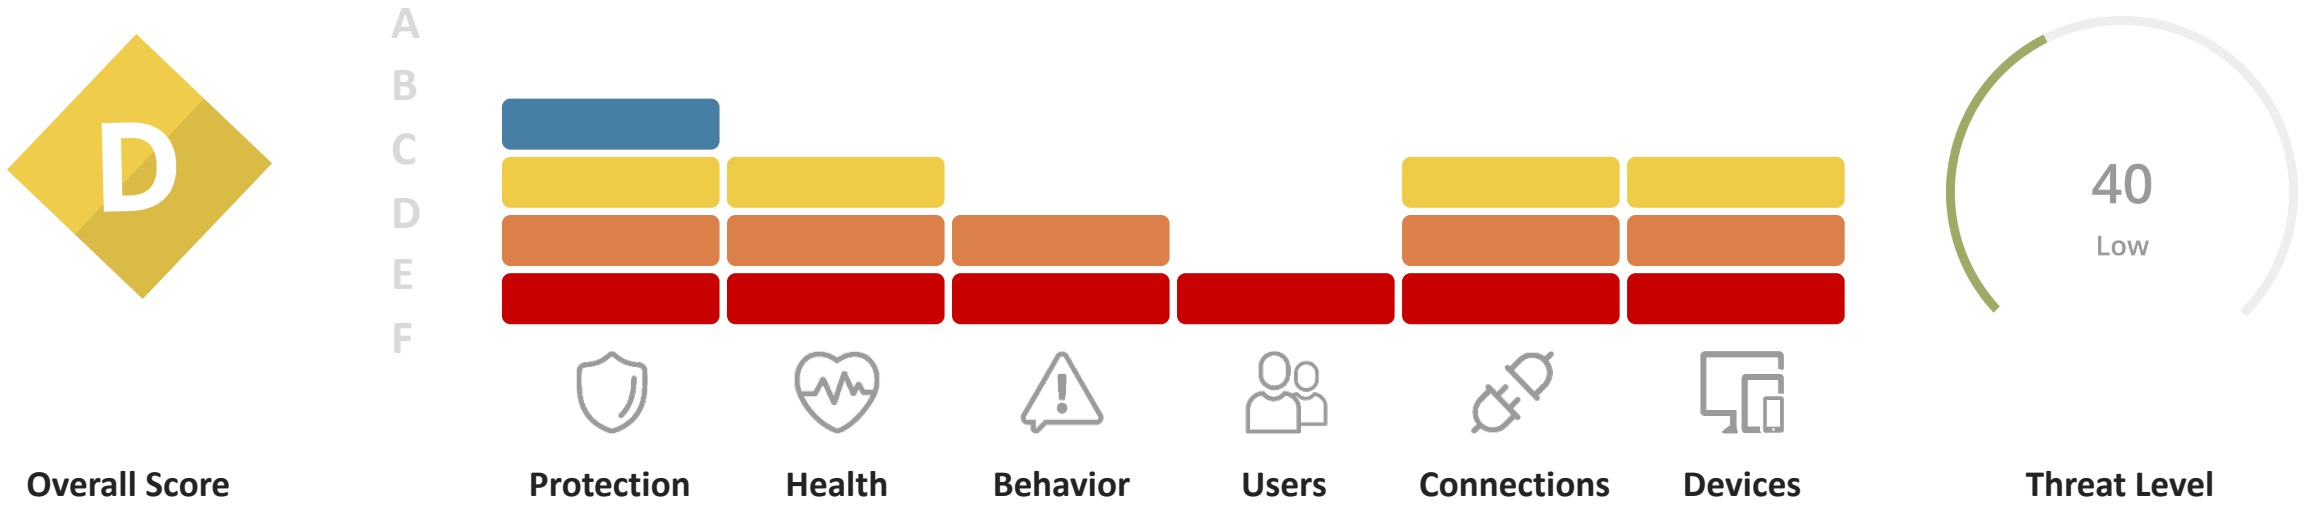
Categories



Threat Level

Together with the Threat Level, summarizing the malicious activity going on towards us.

CyberSecurity ScoreCard



Top 3 Suggested Improvements

Category	Suggested Improvement
Users	Enforce MFA for VPN connections.
Connections	Disable IPsec algorithms with key length < 256.
Behaviour	Users within your network is communicating with know botnets. Perform malware scan.

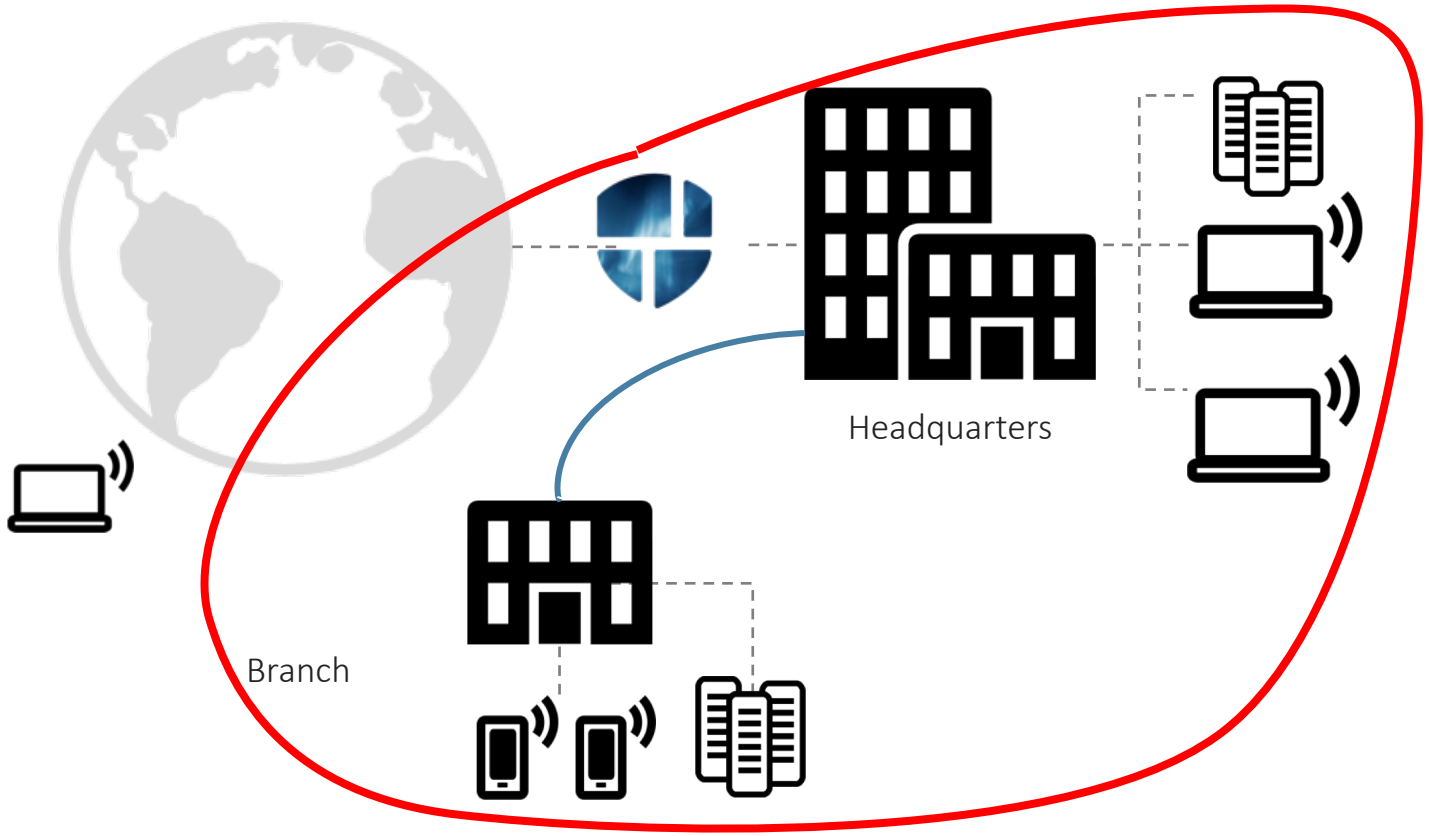
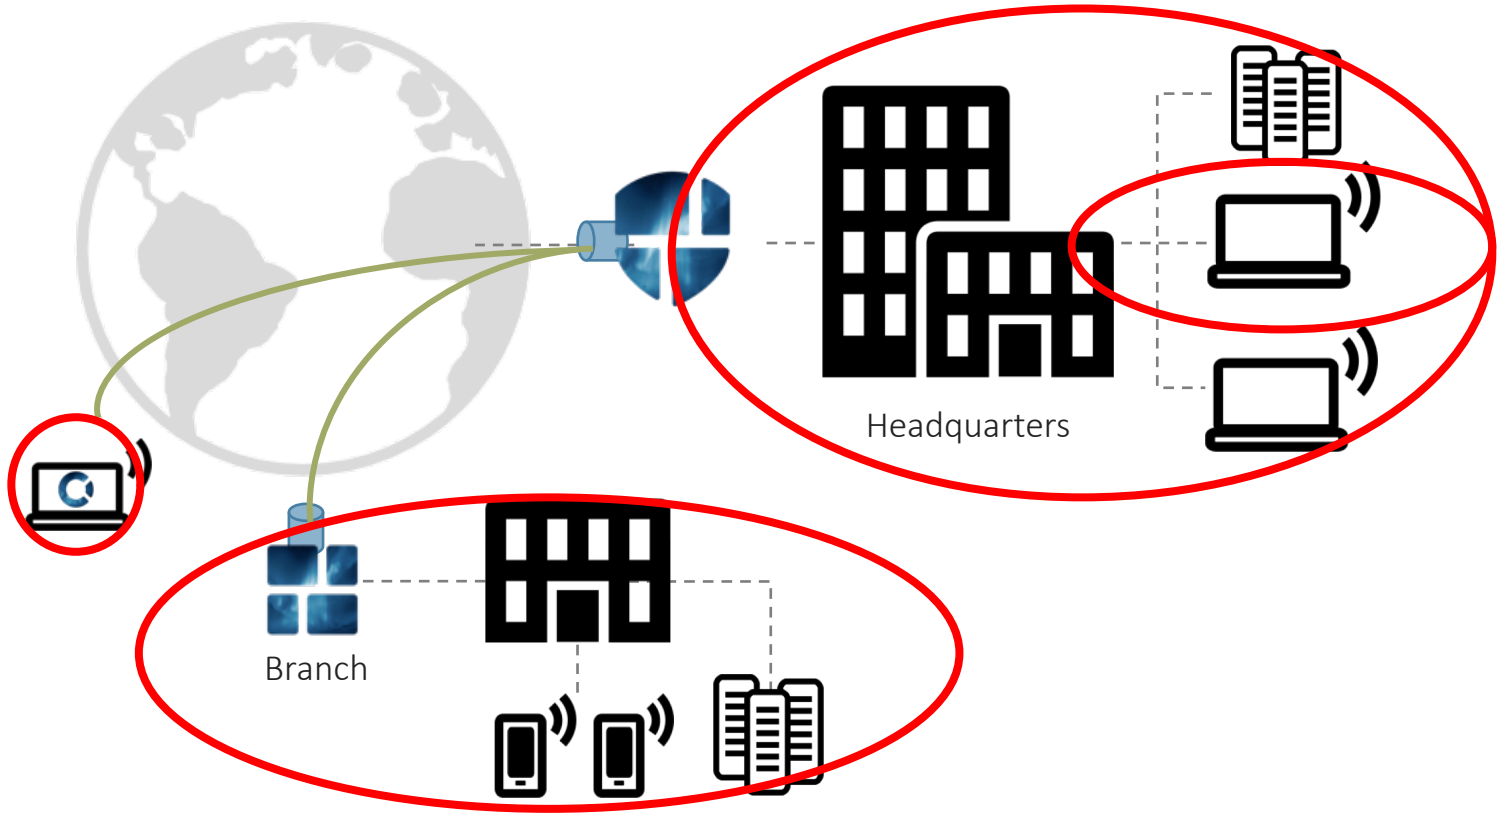
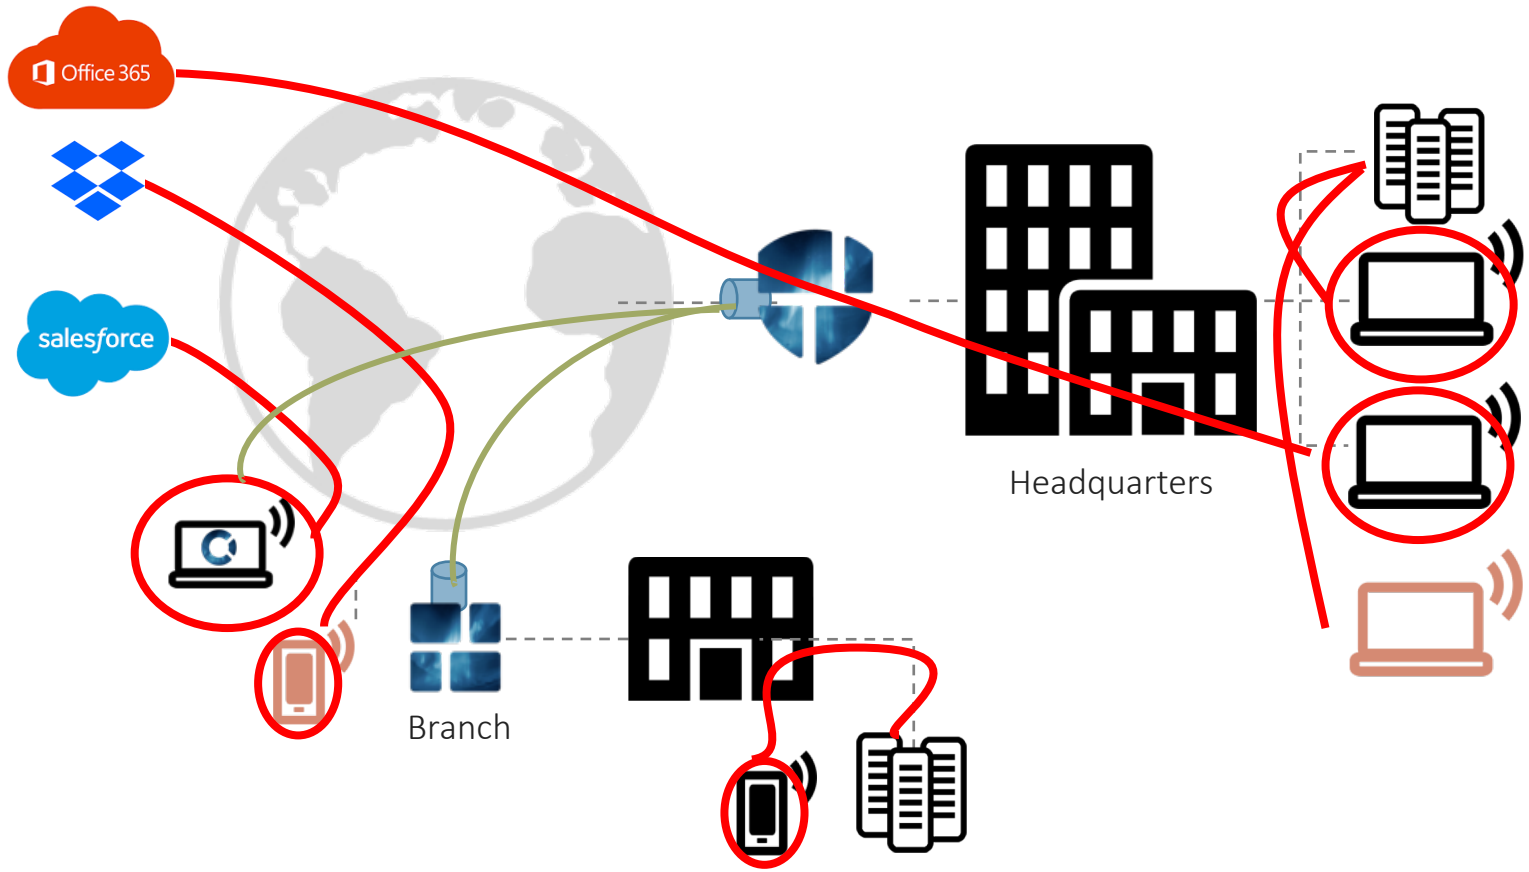
Traditional perimeter protection



Segmentation



The reality



In a “Cloud first” world
the Identity is the new perimeter

If the user / device is the perimeter– then the **only security is their password…**

81% of company data breaches are due to weak passwords
(Verizon Data Breach Investigations Report)

Multi Factor Authentication

Something you
HAVE

Something you
ARE

Something you
KNOW

BUT only 26% of companies have activated MFA ...

SECURITY BY SWEDEN
