

# Catalytic is the easiest path to break through corporate inertia in manufacturing

Our cloud-based automation platform bridges the gap between people, data and existing technologies, automating routine business processes with up to 100% accuracy, sparking a chain reaction of productivity.

## Automate workflows of routine tasks

Your employees are overworked, and you need to get more done, faster. Imagine how an assembly line builds cars, mail merge streamlines bulk mailings, or a calendar updates when an invitation is accepted. Apply these same intelligent functions to your business tasks like document creation and data processing.

## Optimize employee efforts

Improve the quality, accuracy and efficiency of end-to-end workflows, made up of common office tasks, while freeing up your employees to focus on the creative and strategic work that meaningfully impacts your business and increases competitive edge.

## Reduce errors and missteps

Manually aligning departments and existing technologies in your organization can cause mistakes, missteps and failed handoffs. Catalytic streamlines communication across your entire company and its external networks, with web forms, text extraction, Natural Language Processing and email triage.

## Maintain lower costs

Traditionally, better results require increased investment in your workforce and systems. Catalytic enables you to keep your bottom line low while delivering on client demands. You can do more, faster, with the resources you have, and realize ROI quickly.

### AI and machine learning

The more data processed, the smarter the platform becomes, and the more efficient your organization becomes.

### Cloud-based

We require a much smaller upfront cost compared to on-prem software. Our platform essentially pays for itself.

### An embedded ecosystem

Built-in features from our third-party partner ecosystem augment our slate of business process automations.

### Analytics

Data gleaned from our automations helps you identify strengths and weaknesses in your business, and how you can improve.

### Enterprise-grade security

Our automation platform is simple, safe and secure. We're SOC 2 Type 2- and HIPAA-compliant.

*As much as 45% of work that employees are doing can be automated using available technology, according to McKinsey*

# Automation for manufacturing

When you use Catalytic to automate, track, analyze and improve your manufacturing processes, you can operate at higher speeds, increase accuracy, sharpen your competitive edge, and produce more value for customers than ever before.

## Adapt your business to the changing market

### Problem:

Economic globalization has made your supply chain more complicated and more expensive, and increased competition has made customer demand even greater. You need to do more, faster, with what you have.

### Solution:

Our platform sits on top of your existing technologies and systems, so it's easy to implement and scale. Plus, we're cloud-based and low-code, so you don't have to rely on costly developers and heavy integrations—ours are built in.

## Resource optimization and productivity

### Problem:

All your business inputs are finite, including employees, machinery, assembly line processes, and time. Manually coordinating these pieces of your business wastes money, resources, and limits productivity and output.

### Solution:

The Catalytic platform can assign tasks, manage inventory, gather data, and communicate with third-party vendors and customers for maximum efficiency. From there, AI capabilities can identify how to make those processes even more efficient over time.

## Streamline document creation and processing

### Problem:

From generating quotes, contracts and invoices, to managing dashboards and merging multiple input files to create reports, manufacturing requires time-consuming, repetitive document work, which sacrifices the accuracy and speed your customers demand.

### Solution:

When employees are assisted by automation, processes like these get done faster with less human error and fewer failed handoffs, as well as more opportunity to track the entire process end-to-end.

## Reporting and analysis

### Problem:

Reporting on the endless moving parts within your business—like supplier data and compliance, QA, damaged freight documentation, customer satisfaction, and HR-focused efforts like headcount and benefits consolidation—can take a back seat to more pressing matters.

### Solution:

Catalytic can calculate, report and analyze each one of these tasks automatically. Your business can then glean meaningful, actionable intelligence to adapt quickly to any issues that arise.

### Deliver more

Eliminating process bottlenecks in your pipeline means delivering more to your customers, faster, with the resources you have.

### Decrease risk

Catalytic can automate compliance checks, audits and certification updates so you can eliminate errors and confidently follow best practices.

### Strategize better

Freeing your employees from manual work in spreadsheets, contracts, email and multiple systems enables them to do more strategic work to grow revenue.

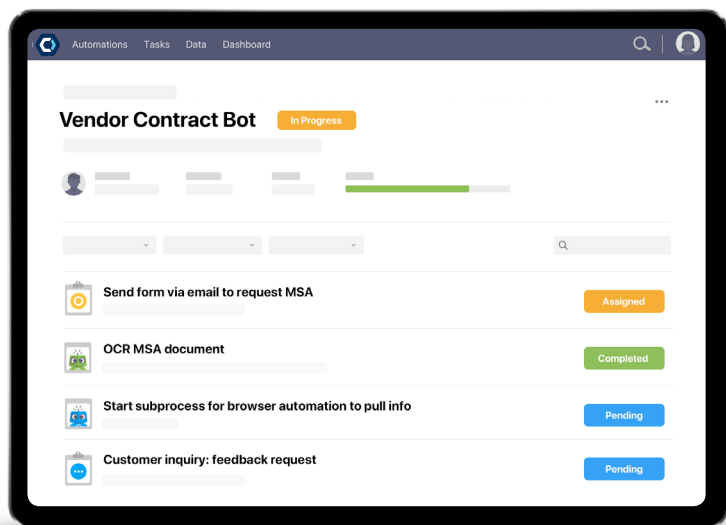

## Customer case study: Bosch

With Catalytic, global manufacturing company Bosch automated more than 5 million tasks, which saved the company 35,000-plus hours of effort in one year, while eliminating the risk of human error.

**5 Million**  
TASKS AUTOMATED

**35,000+**  
HOURS SAVED

**0%**  
ERROR RATE
