

DARREN BIRKS

Information Management Architect
Oxford Health NHS Foundation Trust

Product: *Data Academy*

We first starting using Data Academy and Data Space Frame back in March 2015, and they're now well embedded into our technical infrastructure - the heart of our enterprise data management solution. We are on Data Academy version 6.5 on SQL Server 2012, and we use the product daily to process our data flows.

Using Data Academy and Data Space Frame ensures a rigour and consistency of development, and ensures the developments are not reliant on any one person. It was key to us that the tools did not produce a 'black box'-type solution, and they most certainly do not - everything that Data Academy produces is transparent and open for inspection. Using the tool also means a lot of documentation is produced automatically, which helps reduce another project bugbear!

Data Academy also supports and underpins a robust change management system for promoting code from our development to live environments. Again, this makes my life a lot simpler.

Using Data Academy has enabled us to rapidly create an enterprise data management solution used to deliver a very successful project: supporting continuity of information across a PAS migration.

Data Academy creates robust solutions that are not only built efficiently, but are also able to be maintained efficiently.

This gives me the confidence that we're delivering value and contributing to making the organisation run more effectively.
