

LEE RICKLES

Head of Innovation and Programmes
Humber NHS Foundation Trust

Product: *Data Academy & Acute Health Data Enterprise*

We're very pleased to announce that we've achieved a significant milestone in our new data management programme. Under the Children and Young People's Health Services (CYPHS) guidance, all providers of NHS-funded services to young people under 19 are mandated to submit data for

national submission and analysis purposes. Our first CYPHS submission to the Health and Social Care Information Centre (HSCIC) via the Bureau Service Portal was accepted without change – and we were one of a small number of trusts to achieve this goal.

Additionally, the data management solution we developed jointly with Insource means that every subsequent submission will now be a simple, automated process requiring zero manpower – which will save us untold time and effort.

SystemOne is viewed as a clinically rich application. However, along with many other community providers, we faced challenges in deriving data and information, including what we required for the mandated CYPHS submission. When the SystemOne strategic data extract was released, we took the opportunity to work with Insource to create a strategic data management solution to maximise the benefit of the new data available.

The reason we've achieved such notable success is that we used Insource's Acute Health Data Enterprise solution platform together with their Data Academy development

platform. The combination of these two extremely powerful data management products enabled us to build a system for community hospitals. The system was able to take the required data from the SystemOne extract and then automatically prepare it, so that we were totally confident in our data. It then automatically created and submitted the CYPHS file to HSCIC via the Bureau Service Portal.

SystemOne data and the CYPHS submission are a real challenge for community providers, and we're pleased to be among the leaders in being able to achieve such success.

By using the Insource platforms, our solution has been developed to exacting, professional software development standards – such that similarly developed solutions can be deployed and used by any other trust using the SystemOne Community System.

We feel strongly that we should be sharing this success with others so that they, too, can be confident in their data quality and benefit from the efficiency gains we've achieved.

What we have accomplished has given us the confidence to continue with our data management strategy and establish ourselves as a leader in this field within the community service.

By doing this, and by working closely with Insource, we believe we can help bring other trusts to the same level of technical excellence. And by sharing successes and best practice, we can jointly transform data management within community trusts.
