# MOTHER NATURE

## RAIN/SNOW/SLEET

Moisture from precipitation leads to mold, mildew, and parts corrosion. Transshield coverings keep essential components dry for reliable and extensive use.

## HAIL

Hail can leave pockmarks and chip damage, but Transshield coverings provide a durable, protective layer to fend off the attack.

## HUMIDITY

Transshield coverings reduce extreme temperature fluctuations due to humidity, stabilizing ambient temperature of protected equipment.

## SUN

The proprietary fabric blocks harmful UV rays, preventing fading and paint breakdown that leads to corrosion.

## WIND

Custom designed covers provide a form fit that stays on in windy or erratic weather and reduces rap-flap which causes scratching and etching – all while keeping dirt and particulates at bay.

Transshield coverings protect military investments from all of nature's attacks. The heavy-duty fabric enables greater reliability of equipment, and reduces the time and money spent on cleaning and maintaining critical assets.
