DECRA Shingle XD® in Classic Cobblestone

As the pioneer of stone coated steel technology, DECRA Metal Roofing systems have been proven around the world since 1957. Marketed and installed in over 120 countries, there are millions of DECRA installations worldwide.

Manufactured to US and international quality standards, DECRA products are tested to comply with or exceed current building codes and regulations. DECRA Metal Roofing has been assessed and registered as meeting the ISO 9001:2015, ISO 45001: 2018 and ISO 14001:2015.

Metal roofing is specified as a solution for performance, longevity, versatility and design. DECRA's lightweight metal roof systems are ideal for new construction or renovation in commercial, institutional and residential applications where high performance, long life and low maintenance are necessary.

# WHAT SETS DECRA METAL ROOFING APART?

DECRA Metal Roofing provides safety and protection when it comes to nature's harshest elements such as fire, wind, hail, hurricanes, seismic activity and extreme cold and heat.

## Why?

The cutting edge technology of the acrylic priming system enhances the superior corrosion resistance of the aluminum-zinc alloy coated steel combined with a 62 year history of manufacturing stone coated steel.

- ✓ **50 Year Commercial Warranty\*** (first 20 years non-prorated material and labor)
- ✓ **Wind - 120 mph warranty. Max design pressure up to -153.6psf (equates to over 180 mph). Refer to profile fastening schedules**
- ✓ **Hail - Class IV impact resistance (highest rating)**
- ✓ **Fire - Class A, B, and C fire rated, non-combustible**
- ✓ **Earthquakes - Lightweight roofing fastened with screws strengthens the roof deck to reduce seismic activity failure. Material weight - 150 to 160 lbs per square based on profile**
- ✓ **Miami-Dade County Building Code Approval**
- ✓ **Coastal Environments - Salt Fog Tested to ASTM B117**
- ✓ **Energy Efficient - Above Sheathing Ventilation (ASV)**
- ✓ **Sustainability Attributes - Made with up to 30% recycled content combined, recyclable at end of life, potable water run off, long life, low maintenance**
- ✓ **Added tensile strength through higher grade steel and panel designs.**
- ✓ **26 gauge steel accessories - adds strength and durability to the whole roof system**
- ✓ **Install Savings - Full warranty when roofing over a layer of material - contact DECRA for specifics**
- ✓ **Insurance Discounts Available**
- ✓ **LEED Points Available**

\*DECRA Metal Roofing offers a Lifetime Limited Warranty on single family residential in the U.S. & Canada.

## PEACE OF MIND

Impressive aesthetic designs are what you see at first glance, but underneath are layers of pure protection. A DECRA roof is a piece of beauty that offers peace of mind.

- ✓ **Steel – Aluminum-Zinc Alloy Hot Dip Coating**
- ✓ **Acrylic Priming System**
- ✓ **Acrylic Basecoat**
- ✓ **Ceramic Coated Stone Granules**
- ✓ **Clear Acrylic Overglaze**

Glendale California  
DECRA Shake in Chestnut

Debris that collects under concrete or clay tile becomes kindling in a fire storm.

DECRA products interlock and overlap to keep embers from entering the roof system.

Why do concrete and clay tile roofs fail?  
They fail because they rely on the underlayment to keep water out.

## PROVEN HISTORY OF SURVIVING HARSH CONDITIONS

DECRA's roofing systems have excelled through some of the harshest weather conditions around the world for over 60 years. DECRA's interlocking panels are strong and non-combustible (Class A fire-rated). They are covered by a 50 Year Warranty\* of which the first 20 years are non-prorated and include peace-of-mind coverage for winds up to 120 mph and hailpenetration (Class 4 Impact Resistant).

\*DECRA offers a Lifetime Limited Warranty on single family residential in the U.S. & Canada.

Buildings designed with light and flexible roofs are more resilient to earthquakes because they absorb / distribute energy and bend without breaking. Roofing should be the structure's lightest part as most damage to structures happens from top-heavy tiled roofs.

**"FORE!"**  
 Rogue golf balls cause damage to clay tile roofs and cause a regular and high maintenance expense. Golf balls bounce off or absorb the blow with DECRA products!

Clay tiles struck by hail.

Replaced with DECRA Villa Tile Capri Clay

## SURVIVING THE STORM

"Our Naples, Florida condo was hit dead-on by the eye of Hurricane Irma in September 2017. Lashing us with 140 mph winds, I am happy to report that our DECRA Shake XD roof delivered outstanding performance and protection. Not a single DECRA roof panel in our complex was uplifted or torn off during the storm." — Pattie Villari, Naples Bath & Tennis Club in Naples, Florida

This DECRA Shake roof survived a tornado with no damage.

**Benefit from Above Sheathing Ventilation (ASV):** DECRA Metal Roofing panels create an airspace between the panel and the roof deck. This reduces solar heat gain transfer and helps to reduce and or eliminate ice dams.

## ENERGY EFFICIENCY

Oak Ridge National Laboratory conducted a study, commissioned by the Department of Energy's Buildings Technologies Program, to test different products and roof assemblies. The DOE funded the study because of the development of infrared-blocking color pigments. The first IR-blocking color pigments were used in military camouflage to hide objects from heat seeking devices, and the DOE was interested in the possible benefits of the "cool" pigment when applied to roofing materials, especially stone coated metal roofs. IR-blocking granules are both highly emissive and reflective.

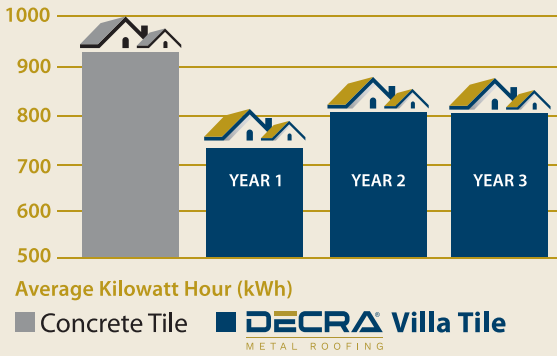

Testing on the metal panels covered with IR-pigments returned unexpected results. When compared to the asphalt shingle roof, the test roof covered with an IR-pigment granule, installed on a counter-batten and batten system, reduced heat transfer by about 45% — however, only 15% could be attributed to the IR-pigment granules, and 30% of the reduction could be attributed to over the deck venting.

# COOL ROOFING

Energy saved by switching from concrete tile to DECRA Villa Tile

Antique Chestnut CC, Mist Grey CC, and Tuscan Sun CC are now available in all DECRA profiles. These CRRCC-approved cool roof colors are effective at reflecting unwanted solar heat on the roof.

# SOLAR INTEGRATION

Solar panels can easily be integrated into a DECRA Metal Roof system. Solar systems need a long term roofing system to avoid replacing the roof underneath the panels.

Quick Mount PV ([www.QuickMountPV.com](http://www.QuickMountPV.com)) and QuickBOLT ([www.QuickBOLT.com](http://www.QuickBOLT.com)) both offer solar mounts for DECRA panels, making solar panel installation quick and easy. Quick Mount PV parts QMNS and/or QMWC work on DECRA panels. New roofs use Quick Bolt part numbers 17536, 17548, 17552, 17620, 17626 and Microflash 17669 and associated accessories to retrofit existing roofs.

QuickBOLT (pictured above) offers hooks for both batten and interlocking DECRA Metal Roof systems to mount solar panels to new roofs and Microflash for existing roofs. Quick Mount PV (pictured to the right) also offers different solar mounts for both batten and interlocking DECRA Metal Roofing systems.

# DECRA COMMERCIAL CASE STUDIES

All of DECRA's case studies are available for printing and downloading from the website in PDF format. In addition to the highlighted case studies below, also find case studies on durability, environmental solutions, low maintenance historical preservation and innovative design.

## HISTORIC PRESERVATION: THE RED ANTIQUITIES BUILDING

**Problem:** Constructed in 1873, the Red Antiquities Building in London, Ontario Canada, needed to preserve its historical appearance of a wood shake roof while finding ways to reduce energy and maintenance costs.

**Solution:** DECRA Shake XD in Antique Chestnut reduces the heat in the attic and provides the classic wood shake appearance that meets historical preservation requirements.

**Results:** The restoration of the building will allow for many more years of service to the community and the new roof has helped in reducing maintenance and energy costs.

## RELIGIOUS: BETHLEHEM LUTHERAN CHURCH

**Problem:** Bethlehem Lutheran Church's existing asphalt shingles were falling off due to high wind conditions in Aberdeen, South Dakota.

**Solution:** Installing DECRA Shake XD in Pinnacle Grey. The interlocking nature of DECRA's direct to deck, hidden fastener product can withstand 120 mph winds.

**Results:** Eliminated the need for constant patching, repairing, and fixing the existing asphalt roof. The Shake XD roof provided an upgraded more dimensional appearance while coordinating with the existing church style.

## COMMERCIAL: SLEEP CENTER

**Problem:** The new commercial Sleep Center needed to blend into the residential area it resided in and the old wood shake roof posed a fire hazard.

**Solution:** Installing DECRA Shake XD in Pinnacle Grey. Shake XD is a Class A fire rated material and emulates wood shake.

**Results:** The Class A fire rating ensured patient safety and the choice of Shake XD preserved the residential feel, blending with the surrounding neighborhood. Easy maintenance, a 50-year warranty and minimal noise requirements are also a plus.

## GOVERNMENT: 29 PALMS MILITARY HOUSING

**Problem:** 29 Palms Military Housing was built in a harsh desert environment with harsh winds and extreme temperatures.

**Solution:** Installing DECRA Tile, Shake and Villa Tile. DECRA's fastening methods, ability to withstand 120 mph winds and resistance to temperature fluctuations made it the right choice for the desert.

**Results:** DECRA provided an attractive, yet durable long-term roofing solution. The steel panels not only stand up to the environment but reduce energy consumption and met the military sustainability requirements.

# DECRA PROFILES

## DECRA VILLA TILE

**Installed direct-to-deck**, DECRA Villa Tile features the classic beauty, elegance and architectural detail of an old-world Italian tile.

<b>Installation:</b>	Direct-to-Deck
<b>Minimum Pitch:</b>	3:12
<b>Panel Size:</b>	17" x 44-1/4"
<b>Installed Exposure:</b>	14-1/2" x 39-1/2"
<b>Panels per Square:</b>	25.2
<b>Installed Weight:</b>	160 lbs. / sq.

## DECRA TILE

**Installed over battens**, DECRA Tile, offering the beauty and style of Mediterranean tile, adds a unique elegance to any roof.

<b>Installation:</b>	Over Battens
<b>Minimum Pitch:</b>	3:12
<b>Panel Size:</b>	16-1/2" x 52"
<b>Installed Exposure:</b>	14-1/2" x 50"
<b>Panels per Square:</b>	20
<b>Installed Weight:</b>	150 lbs./sq.

## DECRA SHINGLE XD

**Installed direct-to-deck**, DECRA Shingle XD has the rich, bold appearance of a heavyweight architectural shingle at a fraction of the weight.

<b>Installation:</b>	Direct-to-Deck
<b>Minimum Pitch:</b>	4:12
<b>Panel Size:</b>	14-1/8" x 52-3/8"
<b>Installed Exposure:</b>	12-1/4" x 49-1/2"
<b>Panels per Square:</b>	23.8
<b>Installed Weight:</b>	150 lbs. / sq.

## DECRA SHAKE XD

**Installed direct-to-deck**, DECRA Shake XD emulates the classic beauty and architectural detail of a thick, rustic, hand-split wood shake.

<b>Installation:</b>	Direct-to-Deck
<b>Minimum Pitch:</b>	3:12
<b>Panel Size:</b>	14-1/8" x 52-1/8"
<b>Installed Exposure:</b>	12-3/8" x 49-7/8"
<b>Panels per Square:</b>	23.4
<b>Installed Weight:</b>	150 lbs./sq.

## DECRA SHAKE

**Installed over battens**, DECRA Shake offers the distinctive beauty and richness of cedar shake, while providing durability and longevity.

<b>Installation:</b>	Over Battens
<b>Minimum Pitch:</b>	3:12
<b>Panel Size:</b>	14-5/8" x 53"
<b>Installed Exposure:</b>	12-5/8" x 51"
<b>Panels per Square:</b>	22.4
<b>Installed Weight:</b>	150 lbs./sq.

# DECRA ADDITIONAL APPLICATIONS

Like wood shakes but not the fire risk or insurance bill? How about transforming the appearance of a home to a clay tile without the weight and high costs? The DECRA profiles offer solid 24 hour protection from the elements with the added energy efficiency benefits. Building owners and homeowners alike who desire a metal roof without the look of metal have a proven roof solution with DECRA Metal Roofing.
