

# Returning to the Workplace in Uncertain Times

**Learn how technology provides access to information that reduces employee anxiety and enhances their wellbeing in the workplace under COVID-19 guidelines.**

Remember the grocery store experience in the early days of COVID-19?

- Not knowing if the store was at capacity and if social distancing was possible before entering?
- Not knowing how long the wait would be when there was a line up outside?
- Not knowing how to navigate the aisles and checkout lines while maintaining social distancing?

Groceries stores quickly adapted to these uncertainties with measures such as staff at the entrance to keep track of safe capacity numbers by managing the incoming/outgoing flow of shoppers. They provided hand sanitizer and masks prior to entering the store and established wayfinding and directional signage to maintain social distancing in the aisles. Similar to the measures grocery stores put in place to provide safety to their patrons, we have assembled a series of technologies to return to the workplace safely for the corporate world.

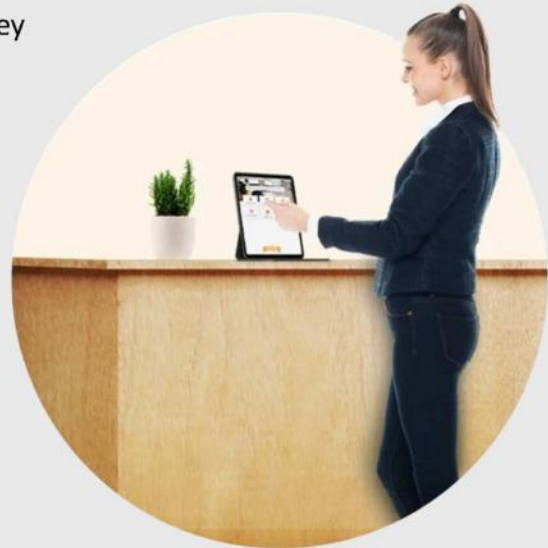

**Companies who had to shift quickly in these early stages demonstrated that providing access to clear information is a key factor in bringing comfort to unfamiliar experiences by making them more palatable and acceptable.**

# Our Solution

Our Customizable Workplace Solutions enable employers to collect information that respects employees' privacy, distills it into pertinent information that removes guesswork from daily and long-term decision-making, and allows them to share it with key stakeholders.

## Touchless Visitor Management Systems

- Ability to preregister guests coming to site and request they fill out questionnaire on health status or travel
- Touch-less registration using smart phone
- iPad at reception to provide barcodes or direction (no touch)
- Alerts contact that visitor is onsite via email, text or UC platform such as Teams or Slack
- Option of printing name badge with photo

[greetly.com](https://greetly.com)

## Temperature Check Tablets

- 3 display sizes available (10", 15" & 21") that can be mounted to a floor stand
- Measures the person's temperature when they stand within 3' of the display
- Accurate to within +/- 0.3° degrees Celsius
- Has an HDMI out so the person monitoring can sit at another station and view same results
- Can send email alerts along with facial recognition
- Not meant to be used for medical purposes

## People Counting Sensor Technology

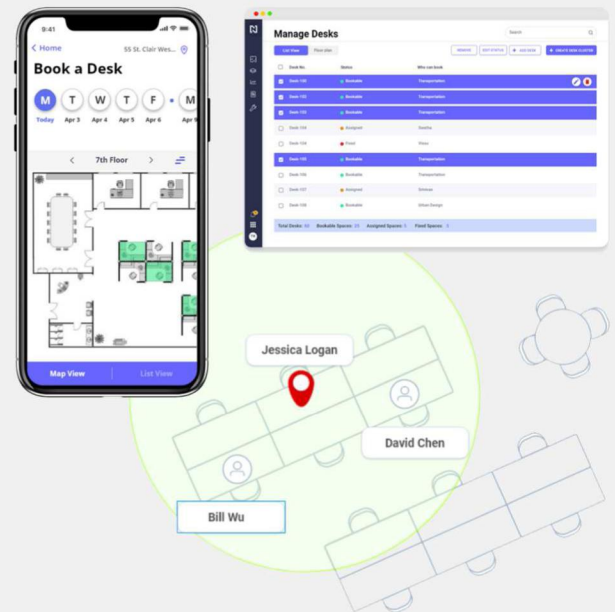

- People counting software / hardware
- Sensors mount over any door giving accurate numbers of people per floor, meeting room, washroom etc. within 98% accuracy
- Alerts can be sent via email, to digital signage dashboards, etc.
- Sensors can tie back to warning lights for red / green visibility.  
For example, if only 3 people are allowed in a washroom at any one time the light will flash red until less than 3 people are in the elevator
- Dashboard can pull info from third party peripherals to provide a complete picture of people movement within a space

## Desk Booking App

- Flexible desk booking utilizing App
- Uses QR code or app on phone for confirming booking when onsite
- Can trace history of user if he/she reports an illness and whom they may have come in contact with
- Ties back to other workplace management software
- Alerts/updates the cleaning staff to ensure desks are sanitized regularly
- Alerts/updates staff if office is shut down via app
- Empowers employees to manage their own desk bookings
