## Parashift Document Center launches UiPath Connector

Sissach, 05.09.2019

### **Parashift, the Swiss DeepTech company in automated invoice processing, provides a connector for the RPA suite UiPath.**

RPA solutions provide companies with important opportunities to automate business processes. According to Gartner, the leading provider in this area is UiPath.

### **Easy access to invoice extraction via the Parashift UiPath Connector**

In order to easily map invoice and document extraction in the UiPath processes, Parashift has now built an appropriate connector. This UiPath-specific component can be integrated into UiPath processes in a standardized way. This allows integration costs and integration time to be significantly reduced, since no interfaces must be adapted.

The integration can be obtained free of charge from the UiPath marketplace:

<https://go.uipath.com/component/parashift-activities>

### **100% automated invoice extraction**

A decisive advantage of Parashift's document extraction platform is the option to obtain invoice data 100% post-validated. This eliminates the need for correction and validation of the extraction results. In interaction with the UiPath robots, autonomous processes in invoice processing are possible end to end. This accelerates the processing time considerably and enables completely new applications.

### **Cooperation with partners**

At the same time, Parashift has started to work with UiPath partners to ensure easy and direct access to fully automated invoice processing. Partners will be announced in the coming weeks. More UiPath partners are welcome.

---

*Parashift AG, founded in 2016, is a deep tech company focusing on the autonomization of document processing through machine learning. Parashift is located near Basel (Switzerland) and employs about 25 people in the field of machine learning engineering and development. Forbes recently named Parashift one of 30 promising AI start-ups in Europe.*
