

S&G® D-Drive™ Z02 Electronic Safe Lock

Innovative Direct Drive Electronic Safe Lock

Why S&G® D-Drive™?

- Lock bolt retraction and extension is controlled directly by turning the keypad ring.
- Attach boltwork or a blocking bar directly to the lock bolt or to optional locking bars without fear of overwhelming the lock's drive mechanism or accelerating wear.

The Z02 Direct Drive Advantage:

- An exclusive, no-twist cable design that virtually eliminates the risk of cable damage due to keypad rotation.
- Sure-grip, low profile keypad gives a good, solid feel for the action of the lock.
- Low profile keypad incorporates an open/close indicator to let you know at a glance if the safe is locked or unlocked.

- Choice of internal or external battery placement. The standard external option puts the battery inside the keypad, where it can be easily changed. Optional internal battery placement puts the battery inside the safe.
- Field installable bolt position indicator (BPI) module is available to let you tie lock action to alarms, video surveillance recorders, etc. The module can be added to a lock at any time, with minimal labor.
- Program the lock from the keypad at any time. No optional, pricey programmer box required.
- The S&G® D-Drive™ lock body is the same size and mounting footprint as other standard S&G locks, allowing for easy retrofit without the need for boltwork or mounting screw location changes.

UL® Type 1 Listed

Z⁰² D-Drive™ by Sargent and Greenleaf

Security features plus positive bolt control

CHOOSE YOUR OPTIMUM MODE THROUGH THE KEYPAD

The Z⁰² D-Drive™ lock is UL Type 1 Listed. It features:
Three Keypad Selectable Modes of Operation—

- Multi-User—The Master Code, Supervisor Code, and any User Code can open the lock with a single code.
- Manager/Employee—User Code holders can access the safe only when it's been enabled by a Master Code or Supervisor Code holder.
- Dual Control—Two different lock codes must be entered within one minute of each other to open the safe.

Multiple Codes—

- One Master Code, one Supervisor Code, five User Codes, one Time Delay Override Code, and a Management Reset Code.

Holdup Protection—

- Time delay is a proven holdup deterrent. The S&G® Z⁰² D-Drive™ lock gives you a time delay up to 99 minutes, and a time delay override code for instant cash carrier access.

Optional Bolt Position Indicator (BPI) module can trigger alarms, CCTV recorders, or virtually any relay activated security device.

The lock cable is completely protected in a specially designed channel in the spindle. It can't get caught, pinched, or crimped as the lock is operated day after day.

The lock battery is housed in a special compartment inside the keypad, where it can be easily accessed for changing.

Protect your assets with the Z⁰² D-Drive™ electronic safe lock.
