

In manufacturing, finding the most efficient way to make a product has always been the dream.

At Oden, we've created a recommendation engine powered by Artificial Intelligence (AI) that turns that dream into a tangible, measurable reality.

We call it the Golden Run.

WHY LOOK FOR THE GOLDEN RUN

The Golden Run recommendation engine hands manufacturers the key to unlocking the true potential of continuous improvement

Any maximizing of efficiency within the production cycle can help save money, reduce waste, improve output and increase overall productivity.

THE BENEFITS

It's easy to use, it delivers faster results, and there's nothing quite like it on the market today.

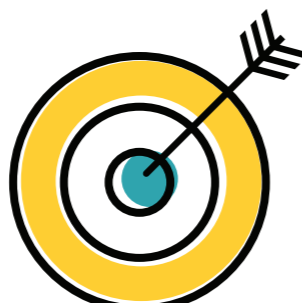

USES HISTORICAL DATA FOR PREDICTIONS

MAKES SETTING RECOMMENDATIONS IN AS LITTLE AS ONE MONTH

FREES ENGINEERS' TIME - NO FURTHER ANALYSIS REQUIRED

ENSURES PERFECT PRODUCTION

HAS FASTER TIME TO VALUE

SAVES YOUR FACTORY MILLIONS

HOW IT WORKS

1

A MANUFACTURER CHOOSES THE ACCEPTABLE QUALITY LEVEL

2

THE GOLDEN RUN LOOKS AT ALL THE PREVIOUS TIMES YOU HAVE MADE A PRODUCT

3

THE RECOMMENDATION ENGINE FINDS THE OPTIMAL SAMPLE OF STABLE PRODUCTION

4

THE GOLDEN RUN TAKES THOSE PARAMETERS AND MAKES THE RECOMMENDED SETTINGS TO THE MOST OPTIMAL RUN

Every manufacturer wants to create more output for less input, and the Golden Run recommendation engine helps them achieve that perfect run goal in the easiest way possible, giving a strong competitive edge.
