

Our Vision

Lockpath helps organizations bring order to the chaos of information governance, compliance, risk management and IT security. Our Keylight® Platform is used to automate business processes, reduce enterprise risk, eliminate redundancy, and demonstrate regulatory compliance. In short, the Keylight Platform provides the most efficient path to audit-readiness.

The Keylight Platform consists of a fully integrated suite of management applications designed to manage all facets of compliance and risk programs, including IT Risk Management, Operational Risk Management, Vendor Risk Management, Audit Management, Business Continuity Management and Corporate Compliance.

Our Motivation

Early Governance, Risk Management and Compliance (GRC) solutions were difficult to implement and often required large teams to manage, a trend that continues to this day. Lockpath's founders recognized a need for easy-to-use software that was flexible and scalable to serve ever-changing and expanding organizations. This led to the creation of the Keylight Platform.

Our Foundation

Complicated software only adds to the complexity of managing compliance, risk, vendor assessments, IT security and audit activities. Organizations need a platform that is flexible, scalable and easily configurable to quickly adapt to changing needs without relying on technical assistance.

The foundation of the Keylight Platform, Lockpath's patented Dynamic Content Framework™ (DCF) gives users the ability to create custom tables and fields. With DCF's drag-and-drop functionality, users can efficiently import and modify large sets of records. It essentially provides business users the ability to generate their own reports without requiring the assistance of developers and report writers.

Our Credentials

Lockpath has achieved ISO 27001 certification, an internationally recognized information security standard. Published by the International Standardization Organization, the certification is only awarded to companies that have continually demonstrated a high level of information security management and the ability to protect customer data.

Lockpath Overview

Who we are

An ISO 27001 certified provider of enterprise software for corporate governance, risk management, compliance and information security.

What we provide

The Keylight Platform is used by organizations to automate business processes, reduce enterprise risk and demonstrate compliance.

Who we serve

Our clients represent organizations ranging from small and midsize companies to Fortune 5 enterprises. They are leaders in health care, financial services, manufacturing, retail, public entities and several other industries.
