

Cristie Backup Solution

Blocky4Backup

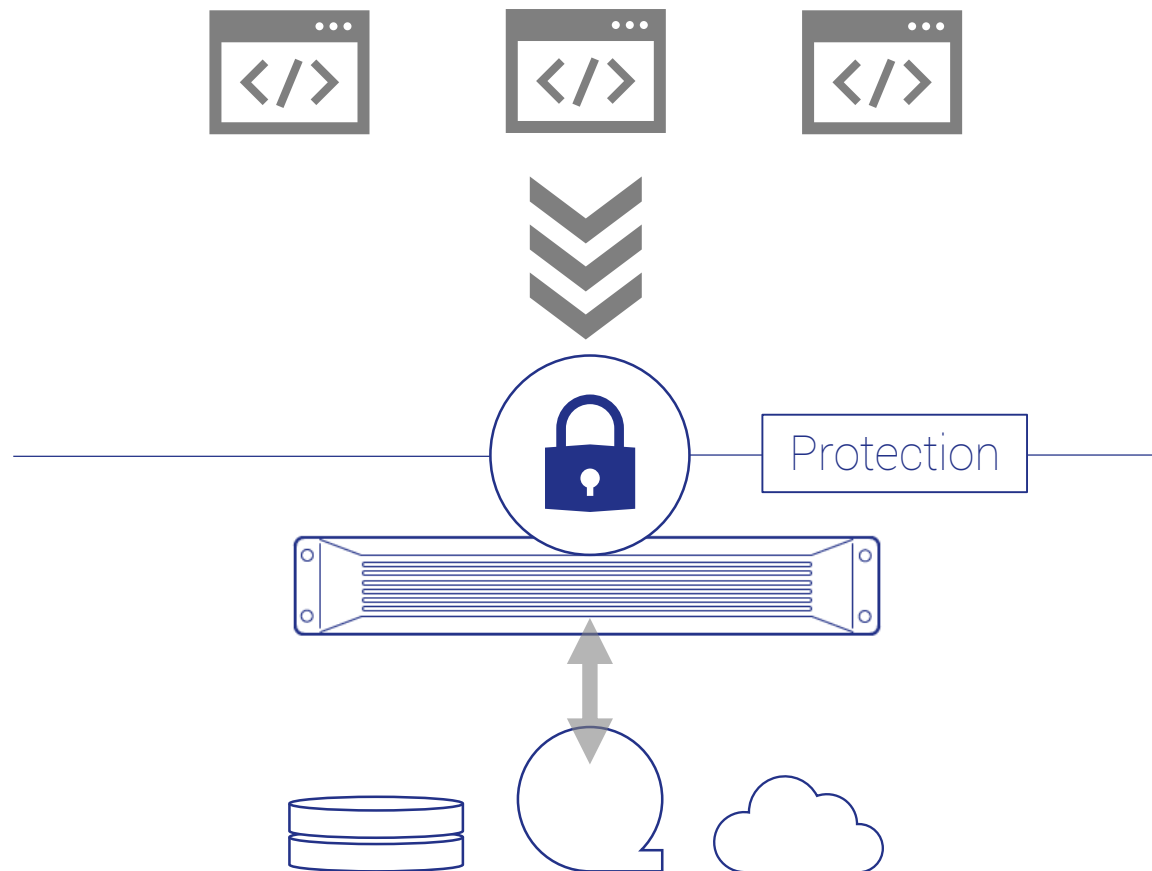

Ransomware Protection

Ideal Protection Against Ransomware for Your Backup

BlockySuite is your shield of protection against ransomware that has already breached other defensive measures. It's the last and at the same time most secure defense line for Windows systems to avoid loss of data: "Your Last Line of Defense."

The effective protection of Blocky4Backup is guaranteed by a security module. As a gate to your data, it enables access to you first – of course only for authenticated processes. That means there is no way for malware through this gate.

The WORM functionality of Blocky4Backup prevents any kind of modification of data without explicit authorization. To identify authorized processes, BlockySuite uses the application fingerprint. This way, Blocky4Backup forms a secure shield for your data in Windows systems.

Windows based backup servers for Veeam, IBM, Veritas, CommVault etc
