

The Engines Mounted on MRJ's First Flight Test Aircraft

Mitsubishi Aircraft Corporation
Mitsubishi Heavy Industries,
Ltd.

Nagoya, June 26, 2014 –

The PurePower® PW1200G engines were mounted on the Mitsubishi Regional Jet's (MRJ) first flight test aircraft at Mitsubishi Heavy Industries' (MHI) final-assembly factory (Komaki South Plant, MHI's Nagoya Aerospace Systems Works located in Aichi Prefecture). This engine mount marks a significant milestone toward MRJ's completion.

Mitsubishi Aircraft has been engaged in mounting the Pratt & Whitney's PurePower® engines since mid-June. The installation of other equipment, the wiring work and the piping work are being carried out, fast tracking the final-assembly process for the first flight scheduled next year.

Mitsubishi Aircraft and MHI remain firmly committed to the success of the MRJ program as well as the growth of Japan's aviation industry.

About the MRJ

Mitsubishi Regional Jet is a family of 70~90-seat next-generation aircraft featuring the Pratt & Whitney's revolutionary PurePower® engine and state-of-the-art aerodynamics to drastically reduce fuel consumption, noise, and emissions, while offering top-class operational benefits, an outstanding cabin designed for heightened passenger flying comfort, and large overhead bins.
