

Patented *HydroActive* Seal Technology that works... when others don't!

Bulkhead Shaft Seals are a critical piece of the propulsion safety equipment that stops cross compartment flooding following a compromising event – **keeping the ship and crew safe while completing the mission.**

HydroActive Technology Benefits

Shock Survivability

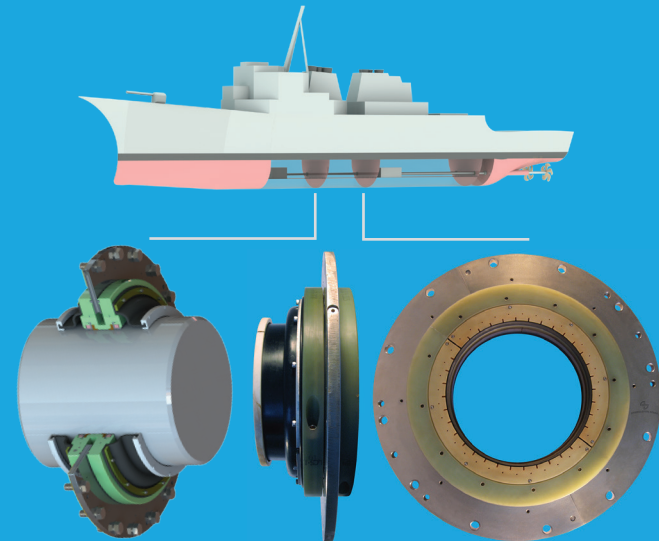

Increased Ship & Crew Safety

Operating Cost Savings

Non-Contact Main Seal
Reduced Maintenance
Corrosion Resistant Materials

Industry Leading Performance

Completion of Mission
Customizable Sizes
Lightweight

Innovative Stern Tube Seal Design and Advanced Materials Provides Your Fleet New Critical Capabilities

Stern tube seals keep seawater out of your vessel. These seals combine innovation and advanced materials to provide industry leading shock survivability, significantly reduced operating costs and, most importantly, a patented dynamic back up seal that enables you to **continue the fight** when other seals fail.

HydroActive Technology Benefits

Shock Survivability

Increased Ship & Crew Safety
Less Damaged Components to Replace

Operating Cost Savings

Longer Lasting Face Seal
Reduced Maintenance
Corrosion Resistant Materials

Increased Vessel Performance

Operate THROUGH Casualty Event
No Downtime During an Emergency
Operate Confidently in Dirty Water
