

B2B CROWDSOURCING PLATFORM

Client Overview

The client is a leader in digital transformation, and they harness their creativity and thoughts into building excellent marketing & technical strategies in manufacturing domain. They're changing paradigms of utilizing emerging technologies to help manufacturing industries from shop-floor to sales. The client is also enabling their customers to visualize change and illuminate goals to automate growth and accelerate engagement.

Product Details

The product is a B2B crowdsourcing platform for industrial machinery service and repair. It connects service requesters to qualified service providers in the events of technical glitches in production equipment. Being a niche product and first-in-the-market to solve a pertinent problem, the platform adoption has been growing since its launch.

Implementation Scope

The product comprises a responsive web application along with iOS and Android native apps. A cloud native API server is at the heart of the implementation. A native ad server pushes relevant promotions to targeted users based on their activity and profile.

Entire solution is deployed in Microsoft Azure and utilizes many of its cloud services specially to handle high availability and scaling aspects. All backend services are built on J2EE and deployed as Docker containers.

Technology Stack

Angular, Java J2EE, SQL Server, Solr, Azure, Android, iOS, Dockers
