

INVENTORY OPTIMIZATION NETWORK

Powered by **FlowVision**

“FlowVision has been a valuable asset to the success of Cisco Lean.”

-John Chambers, Retired Chairman and CEO, Cisco

Dynamically optimize and manage inventory and service levels leveraging real-time data across all locations and part numbers.

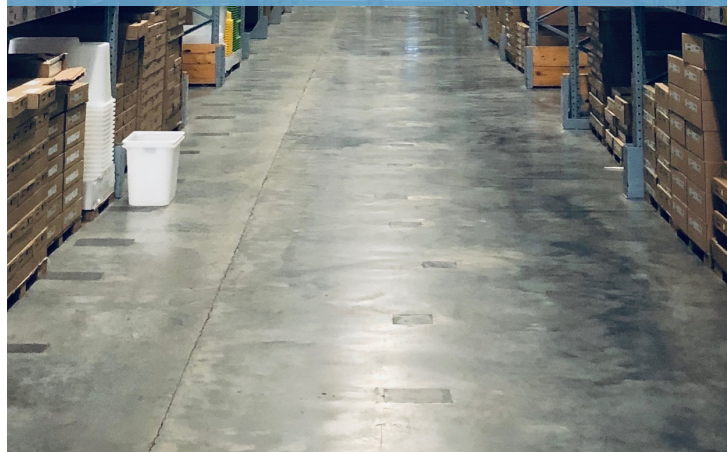

ION

- Multi-level and multi-location based inventory optimization combines demand and inventory planning in an intuitive easy to implement package
- Real-time, inventory optimization based on history and/or forecast for raw material through finished goods
- Leverage patented algorithms to highlight trends and balance your supply chain network taking into account service levels, lead times, demand and forecast volatility
- Actionable dashboards drive accountability and visibility into KPI's

“This is our market advantage”

-Hans Saks, President, Timken

“FlowVision helped reduce our inventory by 50% along with achieving a 14% gain in productivity”

-Scott Gaster, VP Operations, Alliance Laundry

Simplify a Planners Life

- Visually intuitive workflows allow planners, buyers, and executives to manage by exception and easily see and identify trends
- Patented algorithms recommend optimum stocking levels based on inventory trends and forecasts
- Real-time, dynamic expedite list combines automation with the ability to manually override when necessary
- Supports one-time inventory adjustments to account for promotions
- Automatically identify, flag, and replace historical anomalies so that one-time events do not impact future inventory levels
- Map new items to old items with similar consumption to provide a similar consumption history for inventory level setting

Powerful Analysis

- What-if scenario analysis using real-time data
- Understand impacts that service levels and lead times have on inventory levels by location across your network
- Rationalize forecast with historical variation analysis
- Identify, by part number and location, excess inventory as well as parts and locations where inventory cannot support desired fill rates

“ION gives us a more intelligent, algorithm-based demand forecast, where we previously just did everything on spreadsheets.”

-Dennis Wolowiecki, Senior Director Global Powertrain and Electrical Sourcing, Husqvarna

“Our quality improved 25%, our on-time delivery was 99.7% and we reduced work-in-process from 1.5 weeks to less than 8 hours. But best of all, our planning group has complete control of what manufacturing is working on.”

-Joe Campbell, Director of Commercial Operations, IMMI

Technology

- Quick time-to-value - implement in weeks with payback period in months
- Can implement and see value one site at a time
- Multi-level approval hierarchy with complete audit trail can support complex internal rules
- Built as cloud first application and hosted on Microsoft Azure
- Highly configurable reports and export engine

FlowVision®

The Lean Business &
Supply Chain Company

About FlowVision

FlowVision offers a complete suite of lean services from consulting to our patented software; we have demonstrated that we are able to solve any supply chain challenges that our customers face. We have hundreds of global customers in a variety of verticals, ranging from small startups all the way to Fortune 50 Companies.

Using patented algorithms, our ION software solution brings dynamic Kanban to the supply chain by allowing customers to significantly reduce inventory while simultaneously increase service levels.
