## Update for Defence and Aerospace Manufacturers

### IN2GRATE BUSINESS SOLUTIONS

In2grate Business Solutions is a well-established provider of business software for ERP and Logistics.

Supplying some of the world's largest companies with specialist systems for over four decades, our team boasts many years of accumulative experience.

We help our clients to become the supplier of choice to the Defence and Aerospace industries by providing robust, tailored and bespoke systems for companies demanding the very best of operational systems.

Access to some of the Defence and Aerospace industries' leading personnel has given In2grate an understanding of what companies in these sectors require - solutions that are easy to implement and maintain, yet also support their highly specialised requirements.

The diverse set of skills our consultants have gained from experience in these industries allows us to offer solutions and service that make a difference.

### MANUFACTURING FOR DEFENCE AND AEROSPACE

In2grate's business management solutions, supported by industry standard technologies, are helping to overcome the operational logistics challenges faced by the Defence and Aerospace industries.

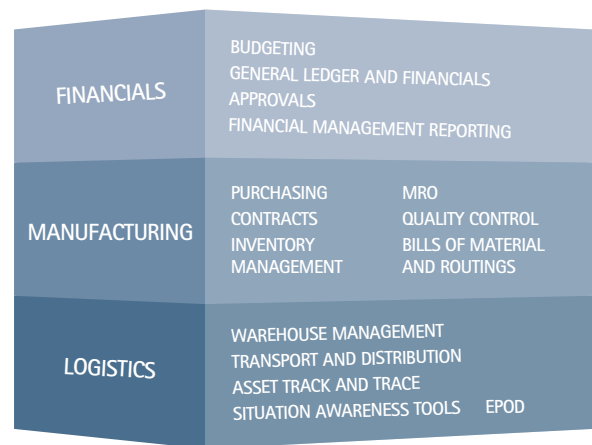

Using open logistics systems and service oriented architecture with robust support networks, In2grate Business Solutions and its partners make valuable contributions in supply chain management, systems logistics, and maintenance, repair and overhaul (MRO).

### COMPLIANCE

Traditional manufacturing software solutions do not meet the requirements of Defence and Aerospace Contractors.

Contractors must maintain budgets, schedules, inventories and quality management systems that meet AS9100 and ISO 9001. Defence and Aerospace software systems need to handle all these requirements and meet Government Contractor DCAA compliance requirements.

### The Core Elements of Integrated Manufacturing and Logistics

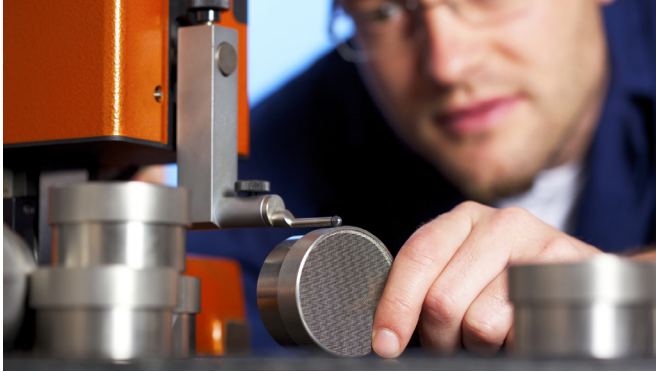

All delivered through managed services

To accommodate the unique requirements of Defence and Aerospace Contractors, In2grate provides JOBSCOPE, an ERP system specifically designed for contract and make to order manufacturing. The comprehensive, project oriented ERP software system helps Contractors to meet DCAA compliance requirements. JOBSCOPE captures contract transactions as they occur, storing them in a relational database that can be organised as required.

## INTEGRATED PROCESSES

World leading manufacturers choose In2grate and JOBSCOPE to bring commonality to departmental processes and standalone IT systems, which to improve cost efficiency within engineering and production departments. By harmonising manufacturing processes and departmental integration, JOBSCOPE increases efficiency and cost savings.

## FLIGHT SAFETY

Additionally, In2grate provides the JOBSCOPE Enterprise ERP system to Aerospace companies, where high quality products are crucial for safety-critical operations. Manufacturers of the ground air systems that form the basis of Traffic Control

systems for advancing safe flight use the JOBSCOPE system to run their key business processes. This allows them to achieve certified international quality standards including ISO9001.

In2grate develops, installs and supports Contract based ERP software for Defence and Aerospace contractors, engineer to order and contract oriented manufacturers. Defence and Aerospace contractors using JOBSCOPE have improved material management & control, contract inventory, cost control, engineering, production scheduling, estimate to complete, and finance.

## LOGISTICS FOR DEFENCE AND AEROSPACE

In addition to expertise in manufacturing process, In2grate works closely with OBS Logistics, which is our sister company within the Anisa Group, and specialises in warehouse and transport management systems for fully integrated supply chain management.

*CALIDUS* Total Logistics is a fully integrated business management solution with components for Integrated Logistics Solutions (ILS); which provides Defence and Aerospace companies with integration, security, ease of deployment and ease of use. Companies can use *CALIDUS* for control across logistics, inventory, supply chain management, and enterprise asset management.

- *CALIDUS* WMS – a multi-warehouse and multi-owner system that tracks inventory from Goods receipt through to final delivery, assigns priorities to tasks, and monitors progress and activity in real time.
- *CALIDUS* TMS – a transport operations management system suitable for 3PL and in-house logistics operations. It plans vehicle trips to optimise driver miles, manages execution of trips from loading through to final proof of delivery, and allows for real-time communication for up to the minute data capture.
- *CALIDUS* TTM – a web based supply chain tracking solution that enables customers, suppliers and staff to track inventory levels and orders. The single integrated view allows the logistics team to monitor the progress of orders, vehicle trips and individual deliveries.

These solutions, along with additional modules for electronic proof of delivery (*CALIDUS* ePOD) and data analytics (*CALIDUS* Vision) combine to offer a truly integrated solution.

With today's improved web-based technologies, and with supporting modules available for finance and human resources, our products meet the pressures posed by acute cost and time constraints with lean, agile, and highly customisable solutions.

## ABOUT IN2GRATE

In2grate Business Solutions creates and supplies business IT solutions for companies in the manufacturing, engineering and supply chain industries, including ERP and Logistics Management software. A Microsoft Gold Certified partner, Master Affiliate for Infor XA and the sole supplier across EMEA for JOBSCOPE, In2grate enables customers to benefit from fully integrated and scalable solutions, including hosted and managed services.
