ADLIB

ADLIB **PROTECT**:
IDENTIFY & ANALYZE DATA RELATED BUSINESS RISKS

Secure Sensitive Information & Drive Total Data Transparency

More than 80% of an organization's data is typically hiding in unstructured formats—from email to MS Office applications, images, CAD files & other documents stored in various fileshares. This results in massive volumes of inaccessible data and unmanaged risk. Safeguard and protect your sensitive information by discovering potential vulnerabilities—no matter where your data is stored.

Adlib Protect enables you to:

Discover & protect data across all your repositories—regardless of format, geography & volume.

Assess identified risks & flagged content assets to determine overall business impact.

**Find, extract & leverage** actionable insights from complex documents.

Drive data transparency across the organization, improving data governance, audit reporting & retention compliance.

Get a unified view of all your data, enabling you to share meaningful insights with business executives.

Meet compliance standards & government regulations (GDPR, CCPA & others) with ease.

50%

...are willing to switch vendors for better data security.

Discover, Analyze & Protect Sensitive Data

With Adlib Protect, you can easily discover, analyze & protect every source of sensitive data in your possession. By gaining complete insight into your data—and the risks it contains—you will identify & action data-related vulnerabilities before they turn into threats.

01 DISCOVER

Identify sensitive information that is vulnerable to internal & external threats. Determine what data needs to be classified, extracted, redacted, or remediated.

02 ANALYZE

Know how sensitive data flows into and outside of your organization. Gain insight into evolving risks that could impact sensitive business information, processes & data. Communicate data exposure & threats to key stakeholders.

03 PROTECT

Minimize the effect of data breaches & safeguard sensitive information. Utilize automated data enrichment to find & protect sensitive information. Safeguard PII, NPI, PHI, SPI, PCI & more.

Secure Your Company's Sensitive Data
