

Area Based Closures

Area-based closures (ABC) are a cost-effective solution to the retirement of oil and gas assets. This voluntary program being promoted by the Alberta Energy Regulator (AER) can exempt participating companies from inspection and reporting requirements for low-risk wells. By investing in an abandonment and site reclamation program within a set geographic area; significant cost savings and efficiencies can be realised.

Turnkey Area Based Closure Services

- Initial Inspection
- Testing
- Suspension
- Remediation
- Reclamation
- Regulatory Compliance
- ABC Management
- Water-Jet Cutting
- Well Abandonment
- Liability Assessments and LLR Program Management

When choosing to partner with SECURE for ABC projects, clients can expect to receive a customer focused, turn-key approach to asset retirement. SECURE's integrated service offerings provide full coverage to ABC management programs – This means one contact and one source of billing from initial inspection to project completion. SECURE's expertise in compliance and regulatory inspections, abandonment, decommissioning and engineered demolition, remediation reclamation and with the vast SECURE owned fleet of specialized equipment has provided us with a strong reputation as a competent ABC and abandonment contractor.

Our abandonment professionals have over 40 years of experience and have completed some of the largest and most complex projects in Western Canada. Our team has successfully completed abandonment projects for energy companies across Alberta, with our most recent 2019 program including a turnkey ABC project valued at over \$5 million. As ABC programs are a new innovative program, owners can trust SECURE's experienced team to understand all regulatory requirements ensuring successful project execution and completion.

Your trusted service partner throughout the energy life cycle.

Processing, Recovery & Disposal

Class I Landfill Solids Disposal
