ABOUT ME

Indica-Dominant Hybrid

Breeder: DNA Genetics

CANNABINOID PROFILE

Please check batch testing info

TASTE/SCENT

ORANGE SWEET CITRUS EARTHY

DESCRIPTION

An indica-dominant cross between Kosher Kush and Tangie. These inflorescences combine the citrus nose of Tangie with a more dense structure and darker coloring from its Kosher Kush parent. Patients who are a fan of the citrus flavor of Tangie but looking for classic indica effects should consider trying 24K.

PARENT #1: Tangie

Sativa-Dominant Hybrid

Breeder: DNA Genetics

Lineage: California Orange x Skunk

Tangie is a sativa-dominant hybrid bred by DNA Genetics that has quickly gained popularity in its home and is spreading elsewhere. This strain is a remake of sorts of the popular version of Tangerine Dream that was sought-after in the 1990s. The genetics on this strain are a cross of California Orange and a Skunk hybrid, and its citrus heritage is the most evident in its refreshing tangerine aroma.

PARENT #2: Kosher Kush

Indica

Breeder: DNA Genetics

Lineage: Unkown

Kosher Kush, offered now in seed form from DNA Genetics, originated in Los Angeles as a clone-only strain. Winner of High Times Cannabis Cup's Best Indica in 2010 and 2011, as well as Best Strain in 2011, Kosher Kush produces staggering levels of THC, with some samples testing over 29%. Known as one of the most odiferous OG Kush-related strains, it has a unique smell reminiscent of rich earth and fruit.
