TASTE/SCENT

ORANGE CITRUS SWEET

DESCRIPTION

Tangie is another fantastic offering from DNA Genetics in Amsterdam that has quickly gained popularity in its home and is spreading elsewhere. This strain is a remake of sorts of the popular version of Tangerine Dream that was sought-after in the 1990s. The genetics on this strain are a cross of California Orange and a Skunk hybrid, and its citrus heritage is the most evident in its refreshing tangerine aroma. As a plant, Tangie grows best outside, producing sticky buds that provide euphoric yet relaxed effects.

PARENT #1: California Orange

Hybrid

Breeder: Sam the Skunkman

Lineage: Unknown

California Orange is an old school classic, dating back to at least 1980, and as such, there is a great deal of mystery surrounding its origin. It is generally accepted to be a 50/50 indica/sativa hybrid, is quite easy to grow, and produces a sweet citrus aroma reminiscent of orange zest.

PARENT #2: Skunk x Unknown

Hybrid

Breeder: Unknown/Disputed

Lineage: Skunk x Unknown

Skunk hybrid
