

POPULATION HEALTH MANAGEMENT

Align Care Delivery with Your Providers

The GuidingCare® Population Health Management module is a robust, web-based care coordination tool developed specifically for use by primary care providers, delegated care services organizations and other key care provider partners. The system incorporates Altruista's intuitive gaps-in-care analytics that allow clinical staff to identify high-risk patients and potential health improvement opportunities.

RELY ON A SINGLE POPULATION HEALTH SOLUTION

Quality management goals don't always overlap between payers and all network providers. Population Health is highly flexible for multiple user and program types, and can be configured for measure sets, data sources, workflow tools and other elements.

ENABLE EARLY INTERVENTION

A Care Transitions workflow provides real-time access to inbound HL7 ADT (admit/discharge/transition) event messages. The module links the messages directly to your care transition workflows to support immediate, clinically appropriate action for every event.

CLOSE THE INFORMATION GAP

The module helps close the information gap between payers and providers through the secure exchange of C-CDA files and other clinical documentation. Clinicians can easily integrate documentation from their EMR systems.

MERGE PERFORMANCE ANALYSIS WITH DAILY CARE WORKFLOWS

Users can evaluate their performance across measured sets that are relevant to the populations they serve. Federal quality measures like HEDIS and Star ratings, as well as state and custom measure sets, can be incorporated.

POPULATION HEALTH MANAGEMENT

Leverage Real-time Clinical Data

The Population Health module supports the secure exchange of data and clinical documentation between payers and providers to close the information gap and drive clinically appropriate actions. GuidingCare also seamlessly integrates with leading data exchange platforms to acquire real-time, clinical data from EHRs, connecting you to thousands of providers. This enables payers to optimize care coordination efforts while reducing the administrative burden on providers.

Close the Information Gap with a Single Solution
