## Keeping People Safe From COVID-19 At Equestrian Sporting Events

The Salus modular mobile solution (patent pending) keeps people safe from the COVID-19 virus at equestrian sporting events. Salus defines, harmonizes, and manages new processes and supporting technologies to ensure that only those that are COVID-19 negative, have COVID-19 antibodies, or have received the COVID-19 vaccination are able to enter equestrian sporting events.

At the heart of the Salus solution is the Salus Mobile Customer, Employee, and Tester app that stores and timestamps on-the-spot test results and grants access to the sporting event. If they are coronavirus-free, the app monitors peoples' temperature

and other symptoms while at the event and uses Geo-Tracking to know if they have left. Salus will then send the individual to be re-tested between 45-48 hours of exiting the equestrian sporting event.

The Salus solution is agnostic to the type of COVID-19 testing kit and supporting technologies such as the thermal cameras, digital thermometers, and entry/exit IoT sensors that plug-and-play with Salus through APIs. All that is needed is a smartphone, our Salus mobile application, and the implementation of the Salus framework of processes.

Customers/Employees can re-access the event but will be notified by the Salus app to be re-tested 45-48 hours after they have exited

The Salus app detects if the Customers/Employees leave the interconnected sporting event, via geo-tracking, and records the time

Ongoing thermal camera and symptoms monitoring at the event

### Salus Mobile App Solution

- 1 Salus app directs Customers/Employees to a mobile COVID-19 testing site close to the event, and the app scans their driver's license
- 2 \*5-minute Mobile COVID-19 Test is conducted
- 3 If the Customer/Employee is COVID-19 negative, their Salus App screen provides a QR code to access the sporting event
- 4 Customers/Employees access the equestrian sporting event with the Salus QR code
- 5 Ongoing thermal camera and symptoms monitoring at the event
- 6 The Salus app detects if the Customers/Employees leave the interconnected sporting event, via geo-tracking, and records the time
- 7 Customers/Employees can re-access the event but will be notified by the Salus app to be re-tested 45-48 hours after they have exited

\*Can include antibody testing and vaccine status. This will exempt immune Customers/Employees from future testing, and Salus will grant them a permanent Access QR code.

## Technical Specs

- ✓ Modular infrastructure platform allows for straightforward integration with systems at the equestrian sporting event where applicable (PMS, access control, etc.)
- ✓ The microservice-based architecture allows integration with existing customer-facing applications
- ✓ Salus-provided apps available for both Android and iOS devices
- ✓ Browser-based admin portal allows for configuration of Salus from any device
- ✓ Flexible hardware integration mechanism allows Salus to remain "future-proof" as more advanced temperature monitoring solutions come to market
- ✓ COVID-19 test kit agnostic. Salus allows the configuration of any test kit with storable properties for test accuracy
- ✓ Leverages location services to ensure that once a guest or employee has been allowed at the event they will be flagged as needing a retest if they leave

## Salus - Bringing us back to the experiences we love
