OptionFinder® Micro 3

The all-new OptionFinder® Micro 3 is a small, highly portable response device at an exceptional price. It makes interactive events economical for groups of any size. The Micro 3's valuable feature set includes:

- **Powerful capabilities**: Participants can provide multiple choice and single or multi-digit numeric inputs. They will also be able to link to different meetings with a simple keypad feature. Your attendees will appreciate the intuitive design.

- **Proven performance**: The Micro Plus uses patented Frequency Hopping Spread Spectrum (FHSS) technology for secure and reliable communications. The keypad LED display lets participants know their input has been counted.

- **Cost effective**: The small size of the Micro 3 also minimizes shipping costs.

KEY Benefits

Features	Benefits
User Input	14 buttons for entering simple or complex responses. Numbers (0-10) plus special keys for Decimal Point, Alert, and Send.
Display	Green and red LED lights confirm key presses and successful transmission to the receiver.
RF Technology	Employs specially designed 2.4 GHz frequency hopping spread spectrum (FHSS) transceivers for excellent range, immunity to interference, and security. Patented and proprietary radio protocol.
User Identification	The keypad to easily identify itself and change its channel via fixed hard coded ID during any session or meeting. Users can easily participate in multiple sessions or activities with full attendance verification.
Speed	Default speed is 200 keypads per second.
Communications Security	A proprietary response verification protocol integral to the radio design provides a high degree of signal security.
Scalability	500 keypads per receiver channel, 31 channels available support a total of 15,500 keypads per site.
