Auto ZCrop

**Auto Zcropping in CORE**

1. Align and ID you images are you normally do. *(It is recommended that you align and ID before you run auto zcropping)*
2. If you have pre-rendered chroma-key images, confirm all renders are complete before proceeding to the next step.
3. After Aligning and IDing go to "Images" on the left menu within the event
   a. Click on Auto Zcrop
   b. Click on the "Configure Folder" button

   c. Select a folder of images to be Auto Zcropped *(folder must only contain images with one face)* , then select the zoom level and click save

   d. You will then see your folder and zoom selection.

e. If you'd like to have additional zooms on the same folder, just repeat the steps and select a different zoom level

f. If you have multiple folders of images you'd like to zoom, repeat the above steps for each folder

Auto Zcrop Setup

Event: Lawton High School Graduation 2018 (27045076)

Configure Folder

The following folders are configured to auto crop:

Folder	Zoom Level	Images	Crops	
101a	1.75X	237	1	delete
101a	2.00X	237	1	delete
201a	1.25X	237	1	delete
201a	1.50X	237	1	delete
301a	1.75X	237	1	delete
301a	2.00X	237	1	delete
401a	1.25X	237	1	delete
401a	1.50X	237	1	delete

ZOOM LEVELS

Original Image	Zoom 1.25x	Zoom 1.50x	Zoom 1.75x

Zoom 2.00x	Zoom 2.25x	Zoom 2.50x	Zoom 2.75x

4. After the auto-zcrop completes you will need to resync the event before the crops will show on the retail website.
