

Scriptless, automate more

TRICENTIS
RPA

RPA enables impressive speed and accuracy gains—until something changes. Then, brittle (script-based) bots break, and specialized resources are required to revive them.

With 15+ years' experience solving the toughest enterprise automation challenges, Tricentis is the expert in resilient, sustainable automation for 160+ technologies. Our bots keep working

when others break. They're low-maintenance, and easily updated by the business user in a matter of minutes. Under our pricing model, you pay only for the on-demand capacity that you need. You're not penalized for creating more bots that automate your business—and you can instantly scale as demand grows.

Automation is in our DNA

Tricentis has a proven track record solving the toughest automation challenges across Global 2000 companies.

Automation @ the speed of change

We don't screen scrape; we automate based on a deep understanding of the underlying technology. That's why our bots know how to adapt to change.

Scriptless, automate more

Script-based bots are brittle. Any user can create and update our resilient "no-code" model-based automation in just minutes.

Proven enterprise solution

1600+ organizations rely on Tricentis' top-ranked technology, global support, and proven partner network.

Built for scale and expansion

Reuse automation modules across bots. Create or update the automation once, and it's applied everywhere.

RPA + test automation

Automation modules can be shared across test automation and RPA to maximize speed and ROI.

Tricentis provides comprehensive breadth and depth of technology support and offers a model-driven approach to automation that maximizes maintainability.

The solution assures a high level of reuse, as it keeps the source of truth in one place: a module that can propagate changes to all dependent automation implementations.
