

DOOR & HALLWAY SYSTEMS

Self Storage Door & Hallway Systems

Whether you are considering a climate-controlled building, a conversion or want to add interior corridors to your facility, our door & hallway systems are the answer.

Benefits of BETCO

Self Storage Door & Hallway Systems

- Pre-painted steel hallway structural components are designed to provide a clean, contemporary appearance preferred by today's owners.
- Flush jambs and headers combine with filler panels and roll-up doors to create attractive corridors.
- Optional soffit systems are available with or without lights.
- Single source design, engineering and installation by BETCO.
- Hallway systems — offer high-durability paint finishes in brilliant white with a 40-year film integrity warranty.
- Durable, high-quality components — resist damage that occurs when lighter-gauge materials are used in high-traffic corridors.
- Interior partitions — interlocking Pittsburgh Lock Seams provide strength and durability. Panels are 30" wide and made of 28-gauge, acrylic-coated galvanized or Galvalume® steel (horizontal partitions are used in some instances).
- Screw-Guard Package — top and bottom screw-guard channels contain screw tips that prevent "snagging". Comes standard at all unit partitions and hallway partitions.
