

ISO 9001 Certification

Quality is just as important as the product, and we stand behind our craftsmanship. To our customers it means support before, during and after the project is our top priority. Our quality department is the heart of our company.

Quality Lab

Customers tell us quality is the most important attribute they consider when choosing new suppliers.

Pivotal to achieving the highest quality is our quality lab. This fully contained, environmentally controlled facility is used by Precise craftsmen to verify and document every mold and component we manufacture.

Every quality inspection form/report for each project is immediately available in both electronic and hardcopy formats. We maintain detailed inspection procedures, and archive a full complement of project photographs, AD drawings and spec sheets.

Our quality management system was independently audited and certified to conform with ISO 9001:2008 in 2014.

Assessment Process

Annual assessments lie at the heart of the ISO 9001 post-certification process. The assessments are conducted by the same independent firms involved during initial applications for quality certification.

The annual assessment focuses on ongoing conformity with core elements of ISO 9001, effectiveness of management system processes demonstration of continuous improvement.

We successfully completed the annual ISO audit in 2017, and have submitted a certification application for ISO 9001:2015 standard.

Precise Tooling is committed to manufacturing high quality machined parts, built to your specifications, delivered when and where you need them, at a fair price.
