

Injection Tooling Services

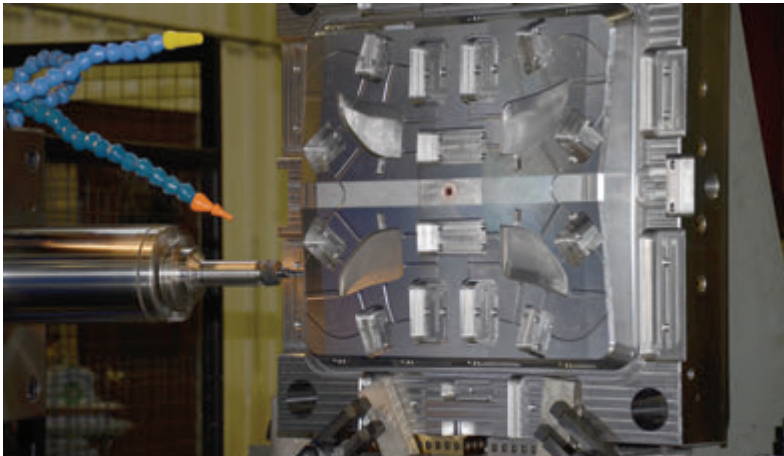

Today's injection tooling requires incredibly tight tolerances. Can your current tooling supplier meet these demanding tolerances without compromising your design or exceeding your budget?

5-Axis Technology

Our Roeders 5-Axis high-speed machine provides milling accuracy within 5 microns. That's an optic-quality finish directly from the machine! This level of precision virtually eliminates the need for EDM and manual polishing. We've paired PowerMill's latest CAM software with our Roeders 5-Axis mill, enabling our craftsmen to deliver the complex design features you need at your targeted price.

We build dozens of injection molds every year for category-leading manufacturers in the aerospace, automotive lighting, medical device and consumer goods industries. With 30 years experience, we aren't afraid to tackle complex project our competitors typically avoid.

Turnkey Services

- The huge 156" x 78" travel size on our 5-axis Fermat boring mill can handle your largest projects
- Our in-house sampling presses ensure 100% functionality before delivering your tooling
- We dedicate a specialized team of craftsmen solely to Engineering Changes & Tooling Repairs
- Our deep experience with productivity enhancements, including foreign-sourced tooling
- We own our fleet of trucks, so our drivers pick up & deliver on your schedule. Less time on the dock means less down time.

Don't compromise your design or overspend your tooling budget
