Ergonomic Workstation

Prevent back injuries and reduce manufacturing costs with ErgoStation, the adjustable height workstation from Precise Tooling Solutions.

This heavy-duty workstation features two (2) chain-driven lift posts. With its 500 lb. lift capacity and full 12" vertical stroke, it provides optimal ergonomic safety in a versatile and affordable package. Add the optional upright frame for unlimited configuration possibilities, allowing you to address all of your assembly, packaging and material handling needs.

Every ErgoStation starts as a welded steel frame, giving it unrivaled structural integrity. A unique lift post design utilizes bushings and bearings to eliminate table flex and side-to-side frame movement, giving it incredible stability. And our proprietary chain-driven, ball screw lift system delivers a consistently smooth action, providing a comfortable and safe workspace whether the operator is 6' 5" or 5' 6".

Simply put, ErgoStation is the most durable ergonomic workstation available. Built to order in four weeks or less, you'll benefit from a safer, more efficient workplace while reducing your manufacturing costs.

- 500 lb. lift capacity with ultra smooth action
- Optional upright frame for overhead accessories
- Integrated fork lift tubes for enhanced mobility
- Durable powder coat finish with any RAL color
- Laminate or butcher block table top, cut to your specs
