

CNC Machining Services

Our team of craftsmen have hundreds of years experience in advanced precision machining, and they're widely recognized for managing complex projects that require an experienced set of hands from concept through production.

Oversized & Complex Projects

We use our CNC machines and 5-Axis mills to manufacture and repair injection tooling, die sets, weldments and similar oversized projects. Every year we expand our fleet of 5-Axis machines, creating additional capacity we need to meet our customer's evolving needs.

- The huge 156" x 78" travel size on our 5-axis Fermat boring mill can easily handle your largest projects
- Advanced controls and automation capabilities make our state-of-the-art 'wire' and 'sinker' EDM machines ideal choices for tight-tolerance applications
- Our large Blanchard grinding capabilities enable us to meet your oversize grinding projects--as large as 120 x 95 inches
- Precise Tooling craftsmen have seen virtually every project imaginable, giving you confidence your project will be done right

Our Customers

We serve category-leading manufacturers in the aerospace, automotive lighting, medical device and consumer goods industries. With 30 years experience, we aren't afraid to tackle the complex project our competitors typically avoid.
