

## Customer Challenge

Our customer, one of the world's largest engine manufacturers, needed a more efficient packaging line at one of their facilities. The initial phase of the project called for nine (9) ergonomic workstations configured with custom shelving and hardware that could accommodate multiple packaging processes.

## Ergonomic Solution

Our time-tested ErgoStation model was used as the chassis for this project. The welded steel frame of each ergonomic workstation provides stability and ensures adaptability to future packaging needs. Tilted stainless steel shelves, keyboard trays and packaging bins were positioned according to the Company's ergonomic guidelines. A textured ABS polymer was applied to enhance the work surface.

**ERGONOMIC**

**DESIGN**

- Individually controlled workstations
- 12" vertical stroke for ergonomic comfort
- Easy access to operator lift control
- Textured ABS polymer to enhance work surface
- Powder-coated to Company's color standard
