

## Fuel Delivery and Service Management

Fast, Easy, Automated – Streamline and Integrate  
Your Delivery Process Through Sage 300

Is your fuel delivery process manual or disconnected from your accounting software? To ensure efficient cash flow and increased customer satisfaction, you need your field employees to spend their time getting deliveries to customers as quickly as possible, and less time on administrative paper work.

Fuel Delivery Automation for Sage 300 bridges the gap between the office and the delivery team, enabling real-time inventory management and improved customer service for fuel companies. With Sage as the platform, you will feed real-time information about deliveries, service tickets, and invoicing into Sage 300 straight from a handheld device or vehicle laptop - eliminating the duplication of efforts and reducing the potential for error in data entry.

The development of Fuel Delivery Automation to work within Sage 300 allows you to manage all operations, collections and payments processes within one interface. New tickets from dispatch are sent in real-time to drivers and technicians. Using any mobile device, they'll receive real-time notifications of new deliveries, service calls or changes to existing tickets. With our integrated invoicing and payment processing system, you can convert jobs to invoices with a single click and receive payments against those invoices directly within the system.

What are the benefits of an integrated delivery solution?

- **Create invoices in the field:** Allow your delivery and service team to create invoices or take payment while in the field and automatically sync with your accounting software.
- **Eliminate duplicate data entry:** Instead of collecting a stack of invoices only to re-enter them into your accounting solution at the end of the day, the integrated solution automatically sends billable items to accounts receivable. This eliminates the cumbersome double data entry, reducing data errors.
- **Stay up-to-date on customer accounts:** Provide even greater customer service with a 360 degree view of your customers' history. See real-time order history, open and closed service tickets and all email and phone communications, all from any device.

Sage 300 - along with Fuel Delivery Automation from ADS - delivers an exceptional service that is fueled by easy access to information you need, when you need it. To start simplifying your fuel delivery process, contact ADS at [contact@atlanticdatasystems.com](mailto:contact@atlanticdatasystems.com) or 1-800-563-8484 and get started today.
