

Andre Blum
Vice President, Engineering

Andre runs ActiveVideo's international engineering teams based in Hilversum, the Netherlands and Bangalore, India. Once a devoted software engineer within the ActiveVideo ranks, he has held management positions since 2013 and counts among his earlier accomplishments defining and executing ActiveVideo's engineering incident support process. More recently, with the addition of AppCloud and the system management product, Andre has led the engineering group's growth and transition to a multi-product company.

A true Linux system and cloud technology aficionado, he values following the latest stable trends and best practices from the industry to make sure ActiveVideo software solutions are easy to recognize, understand and operate, while allowing our engineering specialists to focus on ActiveVideo's core intellectual property. His past work on managing field incidents makes him deeply understand the quality aspects of a product that make it truly carrier grade.

Andre joined ActiveVideo in 2009 following the company's acquisition of Avinity Systems, a leading developer of cloud-based platforms. Previously, Andre pioneered WiFi technologies as co-founder of No Wires Needed, which was acquired by Intersil in 2000 and ultimately became part of Conexant Systems.
