

Jeff Miller
President and CEO

As President and CEO of ActiveVideo, Jeff Miller brings long-term vision and strategic thinking to address the technology and business requirements of service providers, content aggregators and app developers. He builds talented teams that drive technological change, most recently introducing ActiveVideo AppCloud - combining the power, independence, and diversity of the Android ecosystem with ActiveVideo's industry leading virtualization technology and experience.

Jeff joined ActiveVideo in 2000 as senior vice president of engineering, responsible for an architectural transformation to increase scalability, functionality and cost-effectiveness. During his tenure as president and CEO since 2005, he has guided ActiveVideo through multiple large-scale virtualization deployments with operators including Altice (formerly Cablevision), Charter, J:COM and Liberty Global. His strategic acquisitions of Switched Media in 2006, Tag Networks in 2008 and Avinity Systems in 2009 solidified ActiveVideo as the premier innovator of the television experience through virtualization. Recognizing the opportunity to increase global scale, Jeff negotiated the sale of ActiveVideo to a joint venture between Charter Communications and CommScope (previously ARRIS) in 2015.

Prior to ActiveVideo, Jeff co-founded RISQ Modular Systems, an embedded computer manufacturer which he sold to Smart Modular Technologies in 2000. Jeff holds a BS in Electrical Engineering from the University of California, Santa Barbara and an MS in Systems Management from the University of Southern California.
