

End-of-Sale and End-of-Life Announcement for the ActiveVideo CloudTV Platform: RTSP Plugin component

ActiveVideo announces the end-of-sale and end-of-life dates for the RTSP Plugin available in CloudTV Platform V2.4

Description:

The RTSP Plugin establishes the session between settop-box client and a CloudTV Platform server. The server supports the RTSP protocol for session setup and teardown and complies with RFC 2326.

Table 1 Describes the end-of-life milestones, definitions, and dates for the component

Table 2 Lists the affected product part numbers.

Table 3 Recommends replacement for RTSP Plugin

Customers are encouraged to migrate to the new version of CloudTV platform which offers the latest in component upgrades, performance, and flexibility.

Table – 1 End-of-Life Milestones and Dates for the CloudTV Platform RTSP Plugin Component

Milestone	Definition	Date
FCS	The day the version is first available to customer.	
EOL Announcement	Notification of the upcoming End of Sale date for the version and component. This milestone occurs six months prior to the actual End of Sale date.	7/1/2015
End-of-Sale Date	The last date to order the product through ActiveVideo channel.	Not Applicable
End of Software Maintenance Releases Date	The last date that ActiveVideo Engineering may release any final software maintenance releases or bug fixes. After this date, ActiveVideo Engineering will no longer develop, repair, maintain, or test the product software.	1/1/2016
Last Date of Support	The last date to receive service and support for the product. After this date, all support services for the product are unavailable, and the product becomes obsolete.	7/1/2017

Table - 2. Product Part Numbers Affected by This Announcement

	RTSP Plugin in CloudTV Platform This plugin is only available up to CloudTV Platform V2.4 version. No support in V2.5 and beyond.

PRODUCT MIGRATION OPTIONS

The recommended migration for RTSP Plugin.

Table - 3.

Use alternative client protocol	The RFB-TV client protocol is the advised alternative to RTSP. This client protocol supports all important CloudTV features and is supported on the CloudTV Session Manager. The CloudTV Nano library supports this protocol and can be included in any client device. Settop box client need to be build based on RFB-TV protocol for continued support.

About ActiveVideo

ActiveVideo is the developer of CloudTV™, the only cloud-based software platform that virtualizes STB functions in the cloud. ActiveVideo enables service providers and content aggregators to deliver next-gen user interfaces, online content, and interactive advertising for TV to millions of set-top boxes and connected devices. CloudTV™ renders HTML5 user interfaces and experiences in the cloud and streams them as video along with the content to an ultra-thin device client. This approach dynamically scales for service velocity and service portability and enables consistent, branded video experiences across all generations of STBs and connected devices. ActiveVideo takes advantage of bandwidth and cloud computing trends to remove the complexities of UI development and content delivery from device dependencies so that operators can deliver consistent branded user experiences across every STB and IP connected device.
