

Situation Analyst (SA), a subscription-based system, links your CAD, RMS, AVL, and Mapping and allows you to access them all in one location. It analyzes your progress, connects all your operations, and makes situational awareness and planning easy. And you can easily access all this information on your computer, smart phone, or other device.

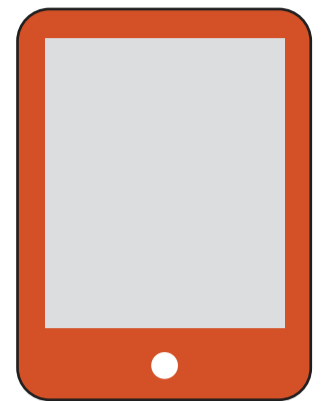

HOW IT WORKS

SA tracks down the critical information you depend on ...

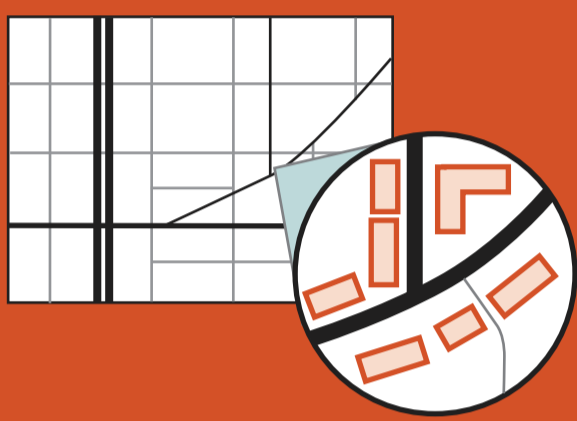

... collects and maintains it securely ...

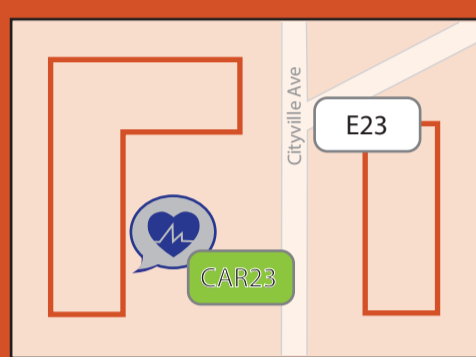

... and places it at your fingertips the moment you need it.

SA's Structure Preplan provides you with the information you need to help you quickly plan your work.

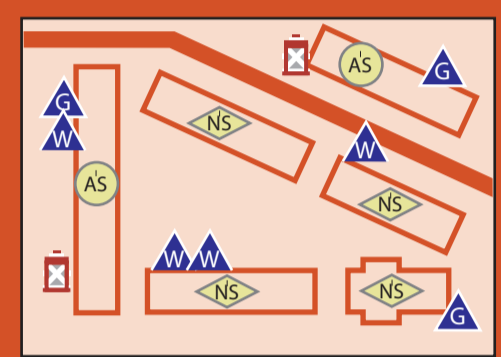

PLAN

You can zoom in or out on the map to get a better view of an area.

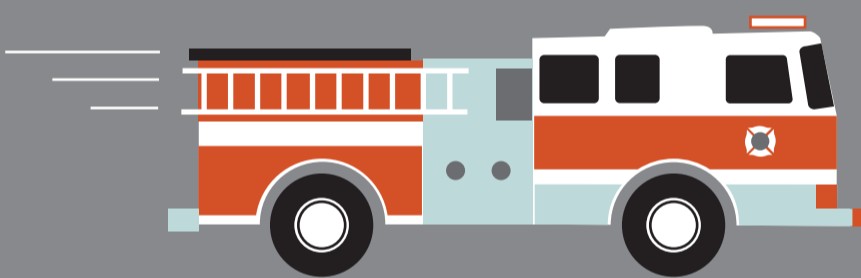

You can see all the live calls in an area in real time.

You can identify important features like buildings, hydrants, gas and water shut-off valves, and determine whether or not a building has sprinklers.

SA gives you complete situational awareness.

EXECUTE

SituationAnalyst continues to place up-to-the-minute information at your fingertips so you can analyze the current situation and make critical adjustments immediately.

SA helps you measure your performance.

ANALYZE

MEASURE

- Alarm, Turnout, and Travel Time
- Standards of Cover & Accreditation
- EMS Metrics

ANALYZE

You can compare your times against previous performances as well as national standards. Analyze your results to plan for future improvement.
