

HAVE YOU HIT A WALL WITH YOUR CLOUD ADOPTION?

Not all clouds are created equal...

Have you hit a wall with your cloud adoption? If so, you probably share many of the same obstacles most organizations face. You need to get out of managing infrastructure so your valuable IT resources can focus on delivering outcomes to your business. The world is moving at whirlwind pace and, in reality, no one receives a gold medal today for “keeping the lights on.” Instead, successful IT leaders are ones that have a proven track record of IT transformation, because IT is a critical part of a company’s overall success.

Private cloud adoption increased to 75% in 2018 from 72% in 2017.¹

Not all applications are cloud ready. Often, legacy infrastructures (bespoke cards, physical servers, mainframes, i-Series) and demanding applications (home grown with no internal knowledge, regulated, high performance, highly secure) cannot move to a shared cloud.

Yet companies still want and need the advantages of cloud for the remainder of their infrastructures and applications.

What can you do to implement and accelerate your digital transformation when your organization seems bogged down with these legacy infrastructures and applications?

Start with our Managed Cloud - Hosted Private Cloud (HPC) solution for your x-86 world, which combines Dell EMC compute and storage with VMware automation and network security with Sungard AS management expertise to create a world-class IT operating infrastructure.

81%

of organizations are adopting a multi-cloud strategy.¹

¹Kim Weins, “Cloud Computing Trends: 2018 State of the Cloud Survey,” Right Scales, 2018, <https://www.rightscale.com/blog/cloud-industry-insights/cloud-computing-trends-2018-state-cloud-survey>

We leverage our 40 years of dealing with complex environments to deliver a high-performance, secure, enterprise-class, dedicated private, hosted cloud.

But there's more. You need to integrate with your other cloud solutions, provided by Amazon Web Services (AWS), Azure or your SaaS vendor.

The Sungard AS solution enables you to utilize the flexibility of your other cloud providers alongside our hosted private cloud service. In fact, Sungard AS will help design your overall cloud strategy to fit your application landscape.

And finally, you need to be secure and resilient.

Sungard AS is a market leader in recovery services. We can provide complete SLA-backed resiliency and recovery, fully integrated with your hosted private cloud platform, as well as your public cloud environments. Unlike many other cloud offerings that provide standalone managed cloud or recovery services, our end-to-end integrated solution provides consistency with seamless transitions across primary and secondary environments.

Break through the “cloud wall” and accelerate your digital transformation and resiliency goals with a Sungard AS, Dell EMC and VMware cloud strategy.

We combine the scalability and agility of a cloud infrastructure with the security, control and performance advantages of a fully dedicated environment. Our customers gain the benefit of single tenant resource control, security and performance. Customers can shift from capital expenditure investments to operating expense spending as they implement their digital transformation objectives. For a comprehensive solution, this is complimented by our integrated security and world-class recovery services to create a fully recoverable production environment for greater peace of mind.

Working with Sungard AS means you can master your hybrid environment, protect and recover systems and data, and accelerate innovation throughout your enterprise, even during the most challenging times.
