# DISASTER**TECH**

Full Tech Stack Built for Disaster Managers

Disaster Tech provides web-based data visualization and data exploration software with user-defined and self-service analytics and data science tools. Gain access to the most comprehensive disaster risk data inventory to explore in real-time before, during, and after disasters.

Preparedness

Employ the tech stack to build plans, design trainings, and conduct exercises before disasters.

Response

Leverage real-time streaming data feeds in context with hundreds of authoritative data sets from government and industry sources for geospatial intelligence, data science, and active analytics.

Recovery

Access machine learning and advanced damage assessment, economic models, and community planning tools to accelerate recovery efforts.

Mitigation

Protect your community from disaster by understanding and addressing vulnerabilities to reduce risk and build more resilient communities.

The Ultimate Disaster Management Platform

Active analytics for decision making and situational awareness

Converges cross-sector real-time data in a single secure platform

Understand any situation using geospatial, charting, graphing, and text analysis with ML

Decide confidently with evidence-based tools

Simulate and plan for future risk

Tell stories with temporal and spatial playback functionality

Save lives, money, and time
