Notarization Service

Allows customers to notarize files of any type via a web console or API, generating a certificate that provides publicly verifiable proof of its timestamp, integrity, and authenticity.

E-signature Service

Customers and required parties electronically sign documents (via a web console or API) while generating publicly verifiable proof of the timestamp and integrity of signatures.

Verification Service

After the signed document or file is notarized, customers can verify it from any device at any time directly from the service's user interface or manually through the blockchain ledger.
