

Our Recycling Mission

QPOD™ - About our Recycled Plastic

QPOD™ are committed to a more sustainable planet and have partnered with reputable suppliers in New Zealand and offshore to source 100% recycled plastics for our manufacturing process.

The following statement made by Budget Plastics NZ a key supplier is speaks for itself:

All our products are manufactured from 100% recycled materials. Started 10 years ago, we are located in Palmerston North and currently the only plastic recycler and manufacturer in the lower North Island.

Our raw materials come from a wide range of sources within the North Island.

We are especially proud of our association with the Palmerston North City Council in efforts to recycle Plastic Waste.

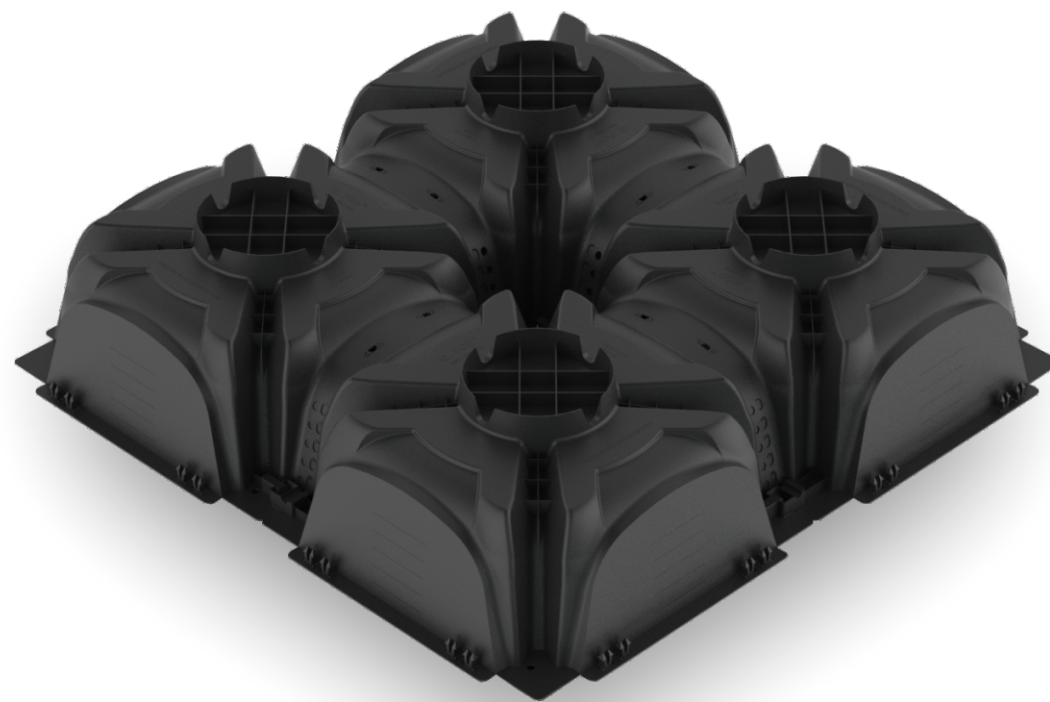

We have a creative team that make it their focus to deliver innovative products to our clients and a manufacturing team that is always looking at ways to maximise your productivity as well as reducing impact on the natural environment. We want to create our products around our customers' needs, so our products can be customized to any size and colour requirements.

If our clients are happy and successful the so are we! - **Budget Plastics NZ**

Recycling our plastic is a noble move, but lets not overlook our first obligation of disposing or recycling our resources responsibly. Trash in the gutter on the side of the road is not so easy to process, put it in the bin.

The modular QPOD™ Foundation System is designed to minimize waste on the site leaving behind only small cutouts for pipes and services. This amounts to less than 0.0005% waste on any construction site choosing to work with QPOD™ . Any cutouts are 100% recyclable in curbside recycling schemes and QPOD™ Manufacturing plants.

Join us in our mission for a more sustainable planet.
